RECLAMATION

CVP Water Temperature Modeling Platform

Modeling Technical Committee (MTC)
Output Subgroup Meeting

June 1, 2023; 2:00 p.m. – 4:00 p.m.

Welcome!!

- We are looking forward to a productive meeting.
- Virtual meetings can be challenging and frustrating, especially with a large groups - please be patient and flexible. If you are having technical difficulties, please chat with Sarah Hamilton, or Sarah.Hamilton@stantec.com
- Chat Panel will be used for participants to provide comments and queue up questions. Use Raise Hand functions in Q&A session.
- Feedbacks on meeting logistic and suggestions: Yung-Hsin Sun, PhD, PE; sun.yunghsin@sunziconsulting.com

MTC Output Subgroup: Objectives

- Build common understanding and receive feedback on WTMP planned features for output.
- Explore options for future enhancements.

MTC Output Subgroup: Agenda

2:00 p.m.	Welcome and Meeting Logistics
2:05 p.m.	Subgroup Orientation
	Objectives
	Recap Output Mechanism in WTMP and Options of Information
2:15 p.m.	Introduction: Applications in WTMP that Generate Output (as planned)
2:30 p.m.	Discussion: Useful Output per Application – What Do They Look Like?
	Model Calibration/Validation
	Seasonal Temperature Plan and Implementation
	Long-term Planning Studies
3:20 p.m.	Discussion: Output Concepts for Future Expanded Use of WTMP
	Concepts for Implemented WTMP Applications
	Concepts for Potential Future Implemented WTMP Applications
3:50 p.m.	Next Steps
4:00 p.m.	Adjourn

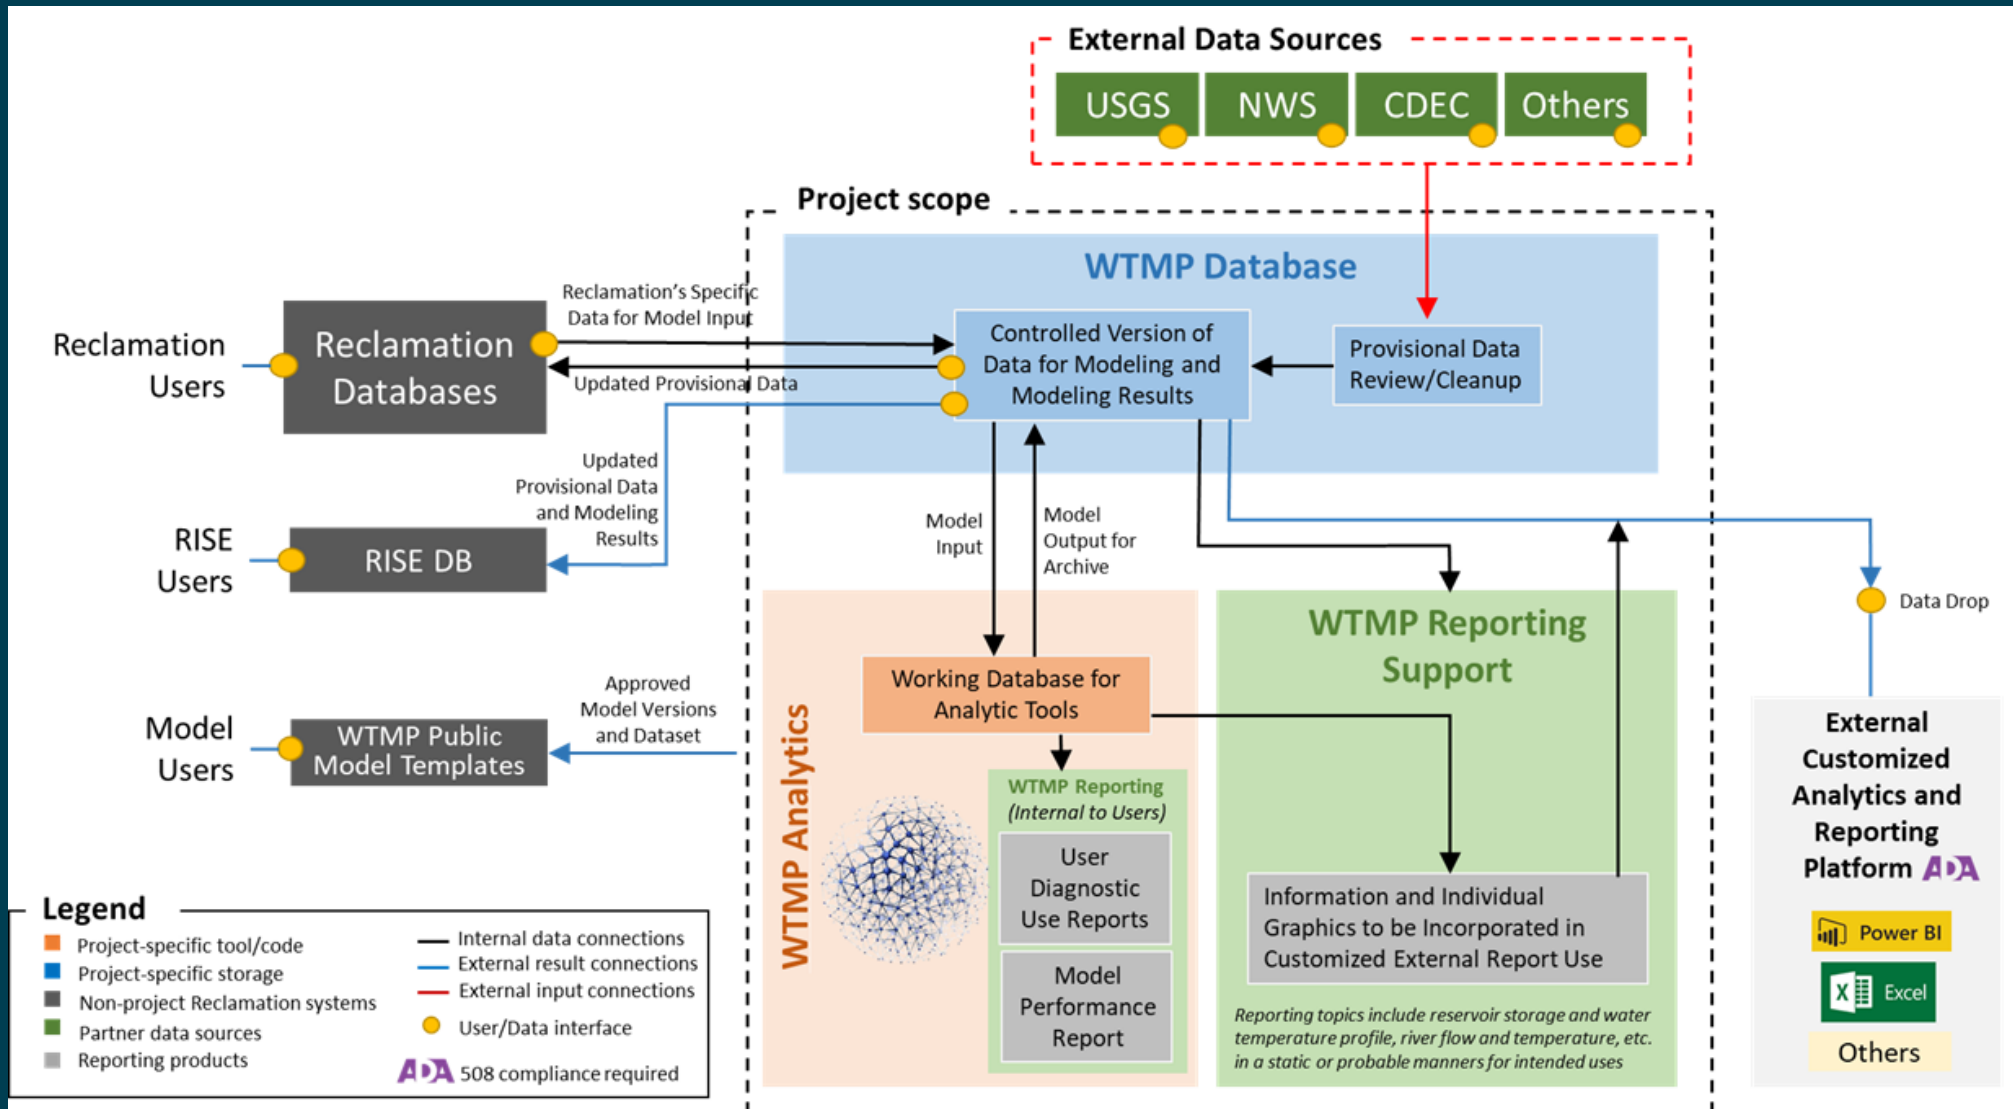

Photo credit: John Hannon, Reclamation

Recap: Output Mechanism in WTMP and Options

John DeGeorge, PhD, PE; RMA

Water Temperature Modeling Platform (WTMP)

Purpose of Automatic Reporting

- Rapid creation of key output tables and graphics to facilitate results review by modelers
- Creation of tables and graphics that could be incorporated in other reporting and presentation products

DRAFT Temperature Model Validation Summary

Project: USBR Framework Test USBR_FrameworkTest

Simulation: 2013-15-ShastaKes
Simulation Date: February 11, 2022 13:04
Report Date: March 24, 2022

USBR Draft Validation,
Project: USBR_FrameworkTest

Report Date: March 24, 2022 Simulation: 2013-15-ShastaKes

Figure 11. Shasta Temperature Outflow

Design Requirements

- Simple report creation action for WTMP users (“one-click”)
- Report configuration files editable by advanced users
- Configuration files should be modular and re-usable (“mix and match”)
- Visual presentation of tables and plots should be easily controlled
- Support similar result presentation from different models

Automatic Reporting Implementation

- Every defined report is scripted and accessible through WTMP user interface.

comparison report (CSV)

Model type, Model Alternative, Chapter Template

```
ResSim, WQ_dsTrib3, Shasta_ResSim.XML  
ResSim, WQ_dsTrib3, Keswick_ResSim.XML  
ResSim, WQ_dsTrib3, UpperSac_ResSim.XML
```

The screenshot displays the 'Model Calibration-Validation Action' dialog box. On the left, a sidebar contains buttons: 'Create Simulation Group...', 'Select Simulation Group...', 'Edit Simulation Group...', 'Delete Simulation Group', 'Get/Update Models', 'Get/Update Data', 'Review Data', 'Edit Compute Settings...', and 'Post Results'. The main area shows simulation details for the year 2014, with a description 'W2 and ResSim examples', start time '1 January 2014, 00:00', and end time '31 December 2014, 24:00'. A table lists simulations: 'ResSim_T_Mix-2014' (selected), 'Keswick 12-16-2014' (selected), and 'S14-KesW2-River-2014' (not selected). A 'Create Report...' button is highlighted. A callout bubble points to this button, stating: 'Create Report displays the report creation dialog for the selected Simulations'. Another callout bubble points to the 'Create Report...' button, stating: 'Comparison Reports will contain results from multiple Simulations'. A third callout bubble points to the 'File Type' dropdown in the 'Select Reports to Create' dialog, stating: 'File Types include PDF, HTML, and MS Word'. The 'Select Reports to Create' dialog shows a tree view with 'ResSim_T_Mix-2014' and 'Keswick 12-16-2014' expanded, both with 'Comparison Report' selected. The 'File Type' is set to 'PDF' and 'Print Headers and Footers' is checked. 'Create Reports' and 'Close' buttons are at the bottom.

Comparison Reports will contain results from multiple Simulations

File Types include PDF, HTML, and MS Word

Automatic Reporting Implementation (Cont.)

- Configuration files (XML format) (i.e., the script)
 - Separated by sections – Report table of contents will show headings for chapters and sections
 - Sections contain one or more report objects
 - Syntax references implemented models and observed data
- Currently available report objects
 - Text Blocks with String substitution; Profile Plots; Time Series Plots; Error Statistics Table; Monthly Statistics Table; Single Statistics Table; Profile Statistics Table; Contour Plots; Reservoir Contour Plots; Buzz Plots (American River Basin only); and Shasta Outlet Operations Plot

Profile Plot Object, subset of documentation

Name	Description	Example
Description	Name of the figure in the Table of Figures and figure name	<Description>Shasta Lake w tribs %%year%%</Description>
Xlabel	Label for X axis of plots at the bottom of a given page of plots	<XLabel>Temperature (C)</XLabel>
Ylabel	Label for Y axis of plots at the left side of a given page of plots	<YLabel>Elevation (ft)</YLabel>
SplitbyYear	Boolean value. If True, separates plots by year. Each year will have its own counter (ex 1 of 3) and be denoted in the table of figures. When a new year starts in the plots, a new plot page will be added, instead of continuing the current plot page in a new panel, even if the max amount of panels per page isn't reached. Default: True	<SplitByYear>False</SplitByYear>
Parameter	Specifies the parameter of data for the plot series. Used to set units flags and grab correct data from model results.	<Parameter>Temperature</Parameter>
ProfilesPerRow	Determines the number of plot panels per row per page Default: 3	<ProfilesPerRow>3</ProfilesPerRow>
RowsPerPage	Determines the number of rows of plots per page Default: 3	<RowsPerPage>3</RowsPerPage>
Gridlines	Boolean to set gridlines on all Profile Plots. Default: True	<Gridlines>True</Gridlines>
UseDepth	Boolean field to determine if profile plots use depths or elevations. Depths start at 0 and increase positively further down the plot. Elevations use the water surface elevation Default: False	<UseDepth>False</UseDepth> <UseDepth>True</UseDepth>
DatesSource	Determines the dates of the Profile Plots. Can either be set to a defined lines <Flag> value (See Line Flags) or a list of calendar dates or Julian dates. If the defined line flag is used, each available date in the dataset (currently only works for Observed data). If a list of dates is to be used, datessource must include a set of subitems of <date>. If left blank, a regular interval of dates is selected using the start and end times of the model run. Default: Observed	<DatesSource>Observed</DatesSource>

Introduction: Applications in WTMP that Generate Output (as planned)

Yung-Hsin Sun, PhD, PE; Sunzi Consulting LLC

John DeGeorge, PhD, PE; RMA

Calibration/Validation

- A significant amount of output figures and tables were incorporated in appendices for the draft Model Development TM
- Design focusing on modeler's needs for review and documentation

— BUREAU OF —
RECLAMATION

Technical Memorandum

Water Temperature Modeling Platform: Model Development, Calibration, Validation, and Sensitivity Analysis (DRAFT)

Central Valley Project Water Temperature Modeling Platform
California-Great Basin Region

*Recently reviewed by MTC; revised draft with
Stanislaus River information coming soon.*

U.S. Department of the Interior

April 2023

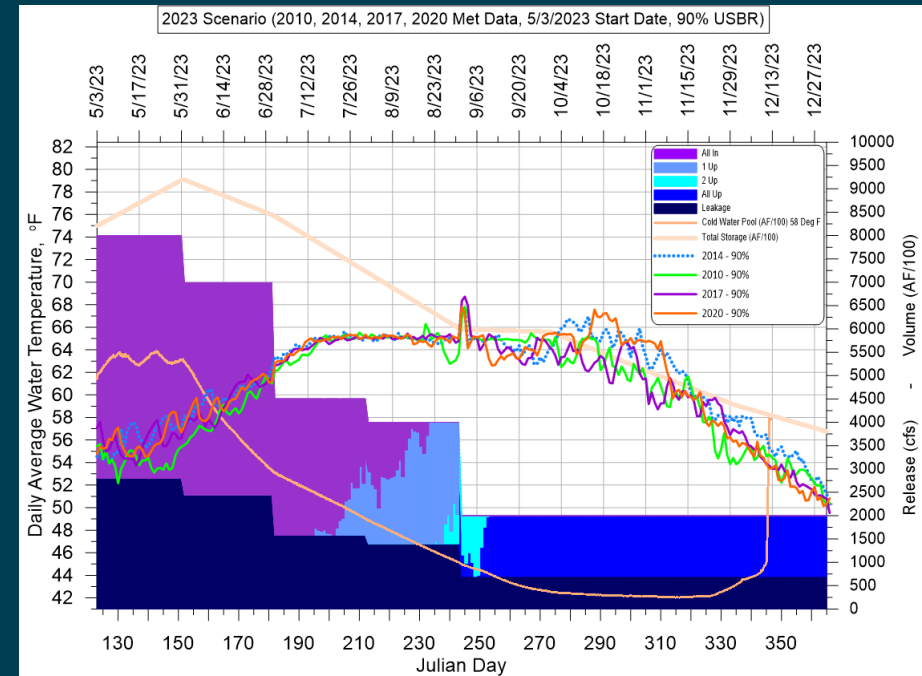

Seasonal Water Temperature Planning

- Focus on relevant information typically included in the meeting package
 - Repeatable template that can be used throughout the season, showing records in the past and forecast in the future.
 - Realized conditions in the past of the current season provide useful context for future actions, including decisions and events of significant effects on water temperature management in the remaining season.
 - The process is a progressive planning process with forecast and correction, and a sequential decision process where the future decisions are subject to the constraints of previous ones.
 - Incorporate forecast uncertainty
 - Selective year scenarios (as in ARG package)
 - Quantifiable uncertainty (work in progress)
 - Necessary tables as identified

Seasonal Water Temperature Planning, Examples

- Example from the SRTTG Package
- Example from the ARG Package

- Is consistent information from different systems important?

Seasonal Water Temperature Planning, Forecasting Example

- Conceptual Error Band Chart (something we are working on)

Seasonal Water Temperature Planning, Hindcast

- End-of-Season Hindcast
 - The hindcast exercise is to inspire lessons learned for improved management.
 - Context is required to be useful.
 - Will the report be different than what we have planned?

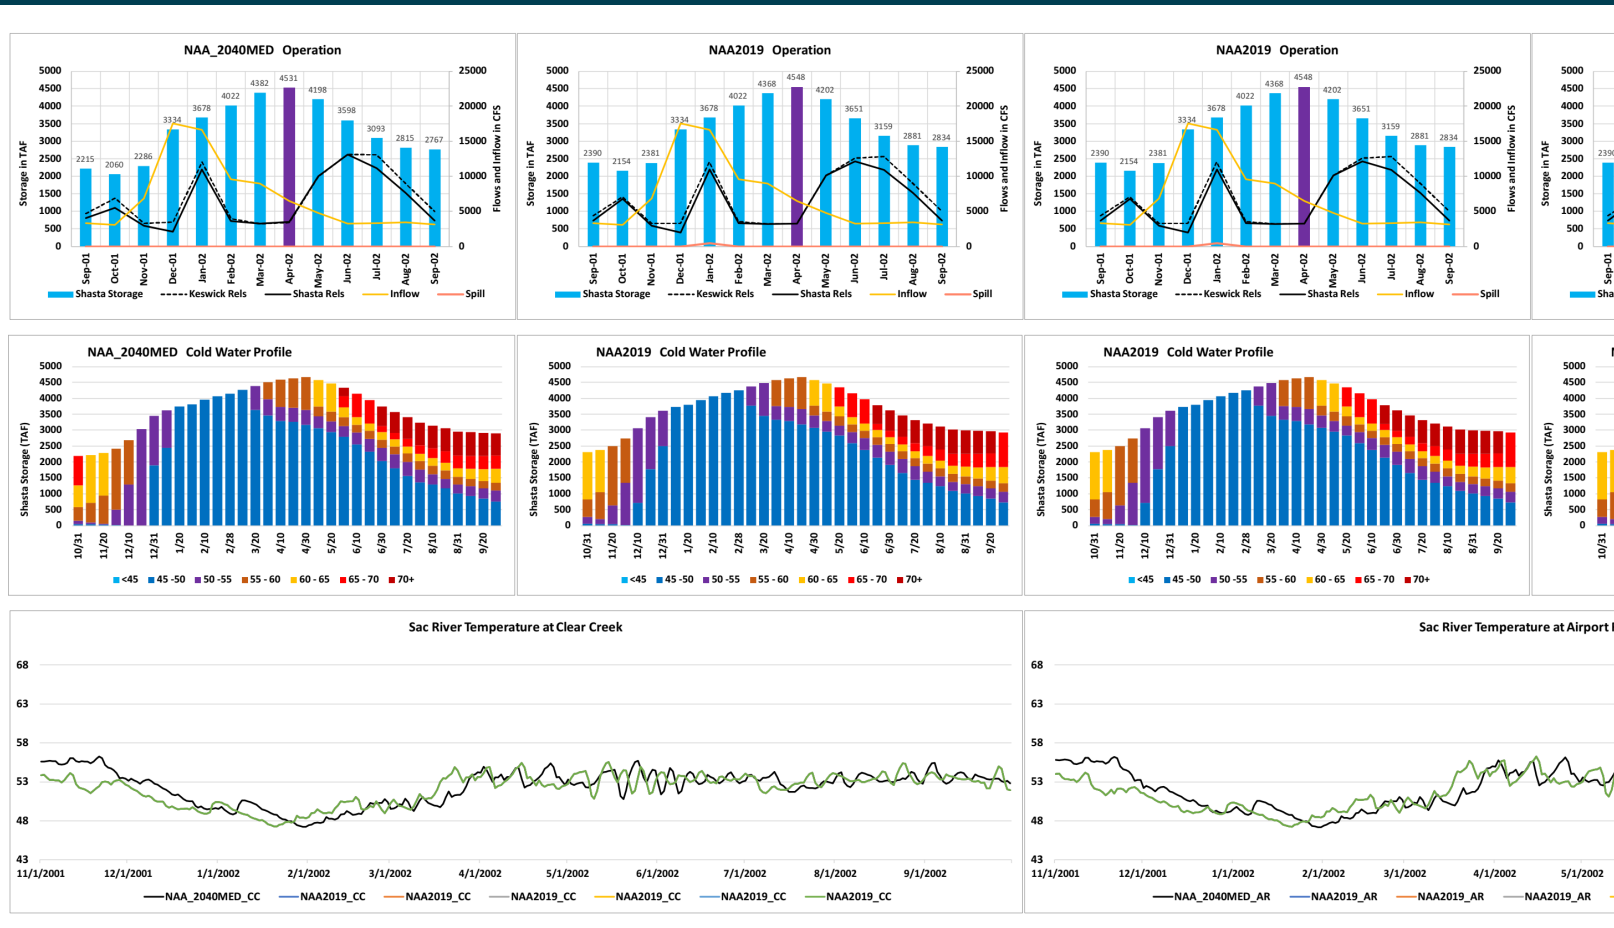

Long-term Planning Studies

- A long-term planning study is different than a seasonal planning study is that it uses CalSim data but not forecast data. It also conducts a seasonal planning study for each simulated year (i.e., 100 years in the latest CalSim 3 in preparation).
 - Seasonal planning output can be leveraged for yearly information from a long-term planning studies. However, the aggregated information and statistics of the entire simulation period may be more important.
 - Work-in-progress with the planning team.
 - Output similar to those from CalSim runs?
 - Something more?

Long-term Planning Studies Example

- Example of using XL for matching display of information of a typical CalSim study review format used by modelers (i.e., an online review tool rather than a report)

Long-term Planning Studies

- Example of an old automatic reporting format from DWR's Oroville Facilities Relicensing Program (circa 2006)

Next Steps

Randi Field, CVO

Yung-Hsin Sun, PhD, PE, Sunzi Consulting LLC

WTMP Next Steps

- Complete the planned implementation for the current project.
- Separately, future development considerations and plan formulation.

Upcoming MTC and Topics

- MTC 09 Meeting: July 6, 2023; 1:00 p.m. – 4:00 p.m.
- Upcoming topics:
 - Model uncertainty
 - WTMP output and visualization
 - Other topics, as needed
- You have the registration link already in the Agenda – do it today.

Information Sharing and Contacts

- Key WTMP team members
 - Randi Field, RField@usbr.gov
 - Mike Deas, Mike.Deas@watercourseinc.com
 - John DeGeorge, jfdegeorge@rmanet.com
 - Craig Addley, Craig.Addley@stantec.com
 - Jeff Schuyler, Eyasco, Inc. jeff@eyasco.com
 - Yung-Hsin Sun, sun.yunghsin@sunziconsulting.com
- Project Information:
 - Contract: mppublicaffairs@usbr.gov
 - Website link - <https://www.usbr.gov/mp/bdo/cvp-wtmp.html>

NEXT MTC MEETING: July 6, 2023;
1:00 p.m. – 4:00 p.m.
