

Cause of Mortality

- Warm water temperatures, low water velocities and volumes, high fish density, and long fish residence times
- Pathogens:
 - *Ichthyophthirius multifiliis* (Ich)
 - *Flavobacterium columnare* (Columnaris)

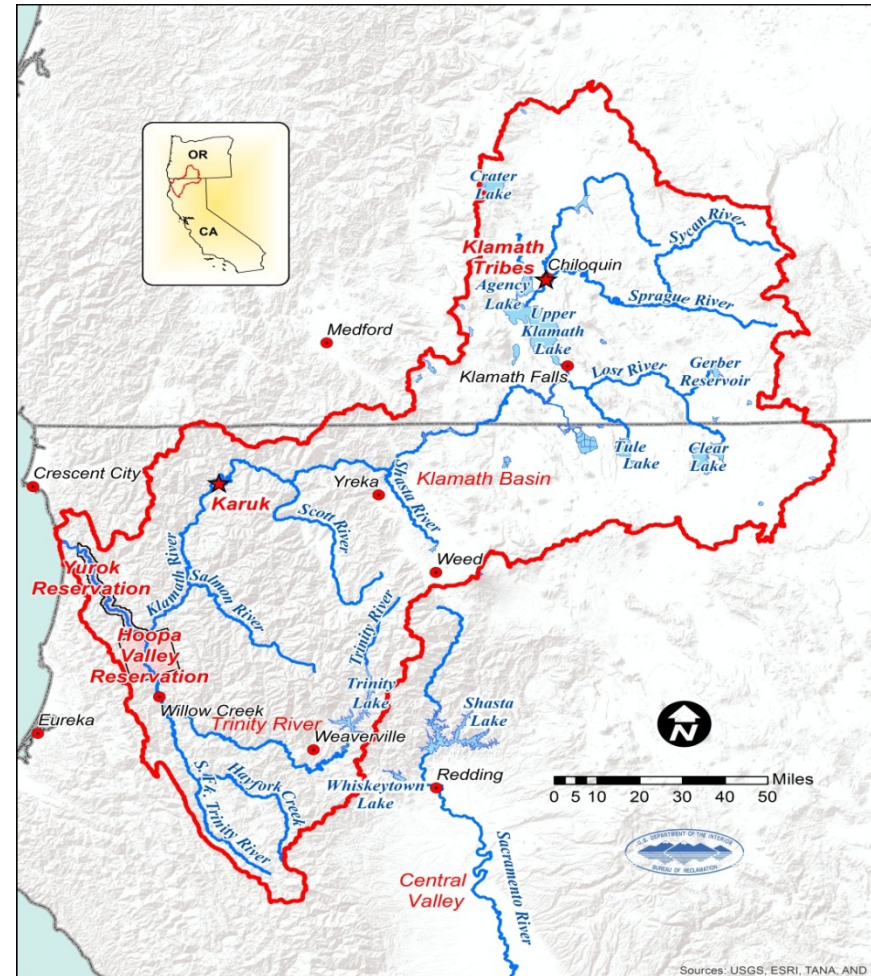

Years of Flow Augmentation to Avert Fish Die-Off

Indian Trust Assets

The Environmental Impact Statement will evaluate impacts to Indian Trust Assets, which are legal interests in assets that are held in trust by the United States Government for federally recognized Indian tribes or individuals.

Trust assets may include lands, minerals, and natural resources, as well as hunting, fishing, and water rights. In some cases, Indian Trust Assets may be located off trust land.

Environmental Justice

Federal mandate to identify and address disproportionately high and adverse human health or environmental effects on minority and lower-income populations (Executive Order 12898)

The Trinity and Klamath rivers flow through rural areas as does water diverted from the Trinity Reservoir to the Sacramento River Valley to potentially influence low income communities that may be influenced by an action.

NEPA requires federal agencies to identify all potential environmental effects, any adverse effects that cannot be avoided, and to evaluate alternatives to the proposed action

Socioeconomic Impacts

The Environmental Impact Statement will evaluate socioeconomic impacts of The Long-Term Plan to agricultural, recreational, commercial, and Tribal uses in the Trinity River Basin, Central Valley, and Sacramento River Basin.

Public Input During Scoping

Your input will help shape the EIS

- Alternatives to the proposed action
- Topics of concern to you
- Questions you want us to answer in the EIS
- Ways to minimize or avoid negative effects of the proposed action
- Suggestions to information sources

Comments for Inclusion in the Scoping Report

To provide comments today
