- C Well Search Report

URS Corporation (URS) was retained by the U.S. Department of the Interior, Bureau of Reclamation, San Joaquin River Restoration Program to conduct a Phase I Environmental Site Assessment (ESA) of the Mendota Pool Bypass and Reach 2B Improvements Project located in the area of the Chowchilla Bifurcation Structures and downstream to Mendota Dam in Mendota, Fresno and Madera Counties, California (Project area). The purpose of this Phase I ESA is to evaluate whether current or historical activities on or near the subject property may have resulted in significant impacts from hazardous substances or petroleum products, also known as recognized environmental conditions (RECs). The Phase I ESA results will be used in the development of the hazardous materials section in the San Joaquin River Restoration Reach 2B Improvements Project Environmental Impact Report (EIR).

The subject property is approximately 11,000 acres in size and consists of land used for agricultural purposes, including row crops, orchards and vineyards. The Mendota Dam dams the San Joaquin River and creates the Mendota Pool, which is used to support the surrounding agricultural land uses. The Chowchilla Bifurcation Structures are used for flood control purposes by the California Department of Water Resources. The normal San Joaquin river flow is released into the San Joaquin river channel. Under flood conditions, the bifurcation dam is opened to spilt the flow between the San Joaquin River channel and the normally dry Chowchilla by-pass channel. Two to three farmhouses with assorted farm buildings were noted on the southeast portion of the project site during the site reconnaissance. Surrounding land use is predominantly commercial and residential.

Topographic coverage of the area is provided by the USGS 7.5-minute series topographic quadrangle map of Mendota Dam, dated 1984, and the USGS 15-minute series topographic quadrangle map of Firebaugh, dated 1962. According to URS' review of the USGS topographic map, the surface elevation of the Project area ranges from approximately 175 feet above mean sea level (msl) at the Chowchilla Bifurcation Structures, to 155 above msl at the Mendota Dam. Area topography has an overall slope to the west. Local groundwater flow direction beneath the subject property may vary, but is inferred to be predominantly to the west. According to the Environmental Data Resources (EDR) database report, the Project area is located within the 100-year flood zone of the San Joaquin River.

No information regarding title records, environmental liens or activity and use limitations, specialized knowledge, valuation reduction for environmental issues, or other information was provided by San Joaquin River Restoration Program (SJRRP) Team indicative of a potential REC associated with the subject property.

Based on a review of the available historical documentation, the Project area was undeveloped land used for agricultural purposes from at least 1925 until the 1950s. From the late 1950s until the present, the Project area was developed with the Mendota Dam, the Mendota Pool, the Chowchilla Bifurcation Structures, sewage treatment plant, levees, marshlands, and farmland.

The EDR database search of facilities on the federal and state lists was reviewed for information on whether hazardous substances, wastes or petroleum products have been improperly handled, stored, or disposed on the subject property and adjacent properties. The following sites within the Project area, or on the boundary of the specified Project area, were identified in the database report as potential REC sites:

- Paramount Farming Company, 10317 Eastside Drive, Firebaugh, CA

- Mendota Solid Waste Disposal, ½ mile east of Bass Avenue, Mendota, CA
- Frank A Logoluso Farms, 2369 San Mateo Avenue, Mendota, CA
- AES Mendota/Covanta Mendota LP, 400 Guillen Parkway, Mendota, CA

Paramount Farming Company at 10317 Eastside Drive in Firebaugh, CA, is located on the northern boundary of the Project area. The site has been identified as having 2.4 tons of asbestos containing waste, and the disposal method is listed as landfill or surface impoundment that will be closed as a landfill (to include on-site treatment and/or stabilization). The site represents a potential environmental concern to the Project area due to the presence of asbestos containing waste.

The following historic REC (HREC) was identified in connection with the Project area:

- Because the Project area was historically used as farmland, pesticide/herbicide residuals may be present in the soil. However, features were not identified (e.g., impoundments, bulk storage facilities or crop dusting air strips) that suggested the handling or storage of significant quantities of pesticides and/or herbicides in the Project area.

URS has performed the Phase I ESA in conformance with the scope and limitations of American Society for Testing and Materials (ASTM) Standard E 1527-05 of the Project area. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report. This assessment has revealed one REC, the Paramount Farming Company, and one HREC, pesticide/herbicide residuals, in connection with the Project area.

During this assessment, URS identified no significant data gaps in reasonably ascertainable information reviewed and described in this report regarding the Project area which would be expected to impact our conclusions.

1.1 PURPOSE

URS was retained by the U.S. Bureau of Reclamation (Reclamation) to conduct a Phase I ESA of the Mendota Pool Bypass and Reach 2B Improvements Project located in the area of the Chowchilla Bifurcation Structures and downstream to Mendota Dam in Mendota, Fresno and Madera Counties, California (Project area). The purpose of this Phase I Environmental Site Assessment (ESA) is to provide a professional opinion on the potential for current presence of recognized environmental concern (REC) at the subject property, including potential impacts from known problems in the surrounding area. The term “recognized environmental condition,” as defined by ASTM Standard E 1527-05, means:

The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures of the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not recognized environmental conditions.

A historic REC (HREC) is defined as “an environmental condition which in the past would have been considered a REC but which may or may not be considered a REC currently. If a past release of any hazardous substances or petroleum products has occurred in connection with the property and has been remediated, with such remediation accepted by the responsible regulatory agency (for example, as evidenced by the issuance of a no further action letter or equivalent), this condition shall be considered an HREC.”

This Phase I ESA was conducted according to the recommended guidelines established by ASTM Standard E 1527-05, “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process,” and is generally consistent with the standards and practices set forth in Title 40 Code of Federal Regulations (CFR) Part 312 for “All Appropriate Inquiry (AAI).” For the purpose of this report, hazardous substances and petroleum products are jointly referred to as “hazardous materials.”

1.2 DETAILED SCOPE-OF-SERVICES

URS performed the following work:

- Conducted a regulatory database search of known underground storage tanks (USTs); landfills; hazardous waste generation or treatment, storage and disposal facilities; and subsurface contamination in the surrounding area up to within one mile of the center of the subject property (or subject property boundaries).
- Reviewed geologic maps from the Environmental Data Resources (EDR) report for information on physical and hydrogeologic settings of the subject property.

- Researched subject property history by (a) reviewing aerial photographs covering the subject property and adjoining property; (b) reviewing topographic maps; and (c) researching the availability of fire insurance maps and city directories of the subject property and vicinity.
- Conducted interviews with the Bureau of Reclamation about the subject property usage and history.
- Conducted a site reconnaissance for obvious evidence of potential contamination such as current hazardous materials storage or use; unusually stained soils, slabs, and pavements; drains, sumps, drums, tanks, and electrical transformers; stressed vegetation; and discarded hazardous materials containers.
- Contacted pertinent local regulatory agencies for information about the subject property usage and history.
- Evaluated the information collected and prepared this report summarizing our findings, opinions, and conclusions.

URS' scope of work did not include sampling or analysis.

1.3 SIGNIFICANT ASSUMPTIONS

No significant assumptions other than those described below in the following section apply to this Phase I ESA.

1.4 LIMITATIONS AND EXCEPTIONS

No apparent conditions were encountered that would limit URS' ability to complete the Scope of Work, with the exception that portions of the subject property were covered with tall grasses limiting observations of portions of the subject property surface.

This Phase I ESA was prepared in accordance with the scope of work described in Section 1.2. The work conducted by URS is limited to the services agreed to with Reclamation and no other services beyond those explicitly stated should be inferred or are implied.

The conclusions presented in this report are professional opinions based solely upon URS' visual observations of the site and immediate site vicinity, and upon URS' interpretations of the readily available historical information, conversations with personnel knowledgeable about the site, and other readily available public information, as referenced in the report. These conclusions are intended exclusively for the purpose stated herein, at the site indicated, and for the project indicated.

This report is intended for the sole use of Reclamation and the San Joaquin River Restoration Program (SJRRP). The SJRRP comprises several Federal and State of California (State) agencies including Reclamation, U.S. Fish and Wildlife Service, National Marine Fisheries Service, California Department of Water Resources, and California Department of Fish and Game. The scope of services performed during this investigation may not be appropriate for other users, and any use or re-use of this document, or the findings and conclusions presented herein is at the sole risk of said user.

This study was not intended to be a definitive investigation of possible contamination at the subject property. The purpose and scope of this investigation was to determine whether there is reason to suspect the possibility of contamination at the site. No exploratory borings, asbestos survey, soil or groundwater sampling, or laboratory analyses were performed at the subject property by URS and, therefore, the conclusions set forth herein are made without the benefit of such investigation.

This report is intended to be used in its entirety. No excerpts may be taken to be representative of the findings of this assessment.

Opinions and recommendations presented in this report apply to site conditions and features as they existed at the time of URS' property visit, and those reasonably foreseeable. They cannot necessarily apply to conditions and features of which URS is unaware and has not had the opportunity to evaluate.

1.5 SPECIAL TERMS AND CONDITIONS

No special terms and conditions apply other than noted below.

URS' objective is to perform our work in a professional manner, exercising the customary thoroughness and competence of environmental and engineering consulting professionals, in accordance with the standard for professional services at the time and location those services are rendered. It is important to recognize that even the most comprehensive scope of services may fail to detect environmental liability on a particular site. Therefore, URS cannot act as insurers and cannot "certify or underwrite" that a site is free of environmental contamination. No expressed or implied representation or warranty is included or intended in our reports except that our work was performed, within the limits prescribed by our client, with the customary thoroughness and competence of our profession.

1.6 USER RELIANCE

This Phase I ESA report has been prepared for use solely by Reclamation and the SJRRP. This report shall not be relied upon by or transferred to any other party, or used for any other purpose, without the express written authorization of URS. This Phase I ESA report is applicable for 180 days.

2.1 LOCATION AND LEGAL DESCRIPTION

The Project area extends along the San Joaquin River from the Chowchilla Bypass Bifurcation Structure to approximately 0.6 miles downstream of the Mendota Dam, in Fresno and Madera Counties, near the town of Mendota, California. The Project area is bounded to the north by Eastside Drive and to the west by Helm Canal Road, and is approximately 1.5 miles north of State Highway 180.

A legal description of the subject property was not provided to URS.

2.2 SUBJECT PROPERTY AND VICINITY GENERAL CHARACTERISTICS

At the upstream end of the Project area, the Chowchilla Bifurcation Structure is used by the California Department of Water Resources to control and route flood releases from Friant Dam and the upstream watershed into Reach 2B and the Chowchilla Bypass, a flood protection project on the San Joaquin River. Under no-flow conditions, pools may be observed at the downstream base of the Chowchilla Bifurcation Structure in both the Chowchilla Bypass and the San Joaquin River. At the downstream end of the Project area, the Mendota Dam dams the San Joaquin River to create the Mendota Pool (Pool). The Pool is shallow, approximately seven miles long, and the elevation is maintained for the purpose of creating hydraulic head for the Fresno Slough, for irrigation purposes. During flood releases, the Mendota Dam's boards are removed, allowing the backwatered Pool to become part of the flowing river.

The Project area includes a dip-crossing at San Mateo Avenue, which consists of a culvert to convey low flows and an earthen embankment supporting the roadbed, which is overtopped during higher flows. Downstream of San Mateo Avenue, the river channel is inundated due to the Pool water surface elevation. Upstream of the crossing at San Mateo Avenue, the channel is only wetted during Interim Flows or flood releases from the Friant Dam. The Pool backwater supports perennial riparian vegetation, whereas upstream of San Mateo Avenue, the channel exhibits a sandy substrate with little vegetation other than riparian scrub communities.

Portions of the existing river corridor in Reach 2B are privately owned. Land use surrounding the Project area is primarily agricultural with the exception of the water management facilities at the Pool. Agricultural uses in the Project area include row crops, orchards and vineyards. Two or three farmhouses with assorted farm buildings were noted on the southeast portion of the Project area during the site reconnaissance. Several water diversions, canals, lift stations, and groundwater wells were noted during the site reconnaissance as being located within the Project area. In addition, electrical and natural gas distribution lines and water pipelines lie within the Project area.

2.3 PHYSICAL SETTING

Topographic coverage of the area is provided by the USGS 7.5-minute series topographic quadrangle map of Mendota Dam, dated 1984, and the USGS 15-minute series topographic quadrangle map of Firebaugh, dated 1962. According to URS' review of the USGS topographic map, the surface elevation of the Project area ranges from approximately 175 feet above mean sea level (msl) at the Chowchilla Bifurcation Structures, to 155 above msl at the Mendota Dam. Area topography has an overall slope to the west. Local groundwater flow direction beneath the

subject property may vary, but is inferred to be predominantly to the west. According to the EDR database report, the Project area is located within a 100-year flood zone.

Shallow groundwater flow direction can be influenced by various parameters, including topography, soil characteristics, and proximity to surface water such as lakes, rivers, streams, and drainage ditches. Based upon a review of the topographic map, groundwater flow direction is likely to the west. However, it should be noted that the relatively flat topography of the subject property and surrounding areas add to the difficulty of establishing likely subsurface conditions, including groundwater flow direction.

2.4 CURRENT SUBJECT PROPERTY USE

As previously noted, the California Department of Water Resources uses the Chowchilla Bifurcation Structure to control and route flood releases from Friant Dam and the upstream watershed into Reach 2B and the Chowchilla Bypass, a flood protection project on the San Joaquin River. At the downstream end of the Project area, the Mendota Dam dams the San Joaquin River to create the Mendota Pool (Pool). During flood releases, the boards are removed at the dam, allowing the backwatered Pool to become part of the flowing river.

Portions of the existing river corridor in Reach 2B are privately owned. Land use surrounding the project area is primarily agriculture with the exception of the water management facilities at the Pool. Agricultural uses in the Project area include row crops, orchards and vineyards.

2.5 DESCRIPTIONS OF STRUCTURES, ROADS AND OTHER IMPROVEMENTS

Two or three farmhouses with assorted farm buildings were noted on the southeast portion of the Project area. Several water diversions, canals, lift stations, and groundwater wells are located within the Project area. In addition, electrical and natural gas distribution lines and water pipelines lie within the Project area.

2.6 CURRENT ADJOINING PROPERTY USES

Land use surrounding the Project area is primarily agriculture with the exception of the water management facilities at the Mendota Pool. Mendota Airport is located within a half mile of the southwestern boundary of the Project area, and the town of Mendota is located about a mile from the Project area.

URS did not identify adjacent properties representing a potential environmental concern during the site reconnaissance or review of the environmental databases (discussed in Section 4.0).

As part of AAI, additional inquiries are required to be conducted by the purchaser of the property. These inquiries include:

- Identification of environmental cleanup liens against the subject property;
- Specialized knowledge or experience regarding the subject property;
- Relationship of the purchase price to the fair market value if the subject property was not contaminated;
- Commonly known or reasonably ascertainable information regarding the subject property; and,
- Degree of obviousness of the presence or likely presence of contamination at the subject property.

The SJRRP Team provided information on the current and historical uses of the subject property. Information provided by the SJRRP Team is included throughout the report.

URS requested information from SJRRP regarding environmental liens or activity and use limitations; specialized knowledge; knowledge of valuation reduction for environmental issues; owner, site manager, and occupant information; reason for conducting the Phase I ESA; and any other information pertinent to the conducting a Phase I ESA (including previous environmental assessments) for the subject property.

3.1 TITLE RECORDS

A title report was not provided to URS for the subject property, nor was obtaining a title report within URS' scope of work.

3.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

No information regarding the existence of environmental liens or activity and use limitations associated with the subject property was provided to URS by SJRRP. URS ordered an environmental liens and activity and use limitations report from EDR for the Project area. The information received from EDR indicated that there are no environmental liens or activity and use limitations reported for the Project area. A copy of the environmental liens and activity and use limitations report is included in Attachment A.

3.3 SPECIALIZED KNOWLEDGE

No specialized knowledge, beyond what is discussed throughout this report, was conveyed to URS during the preparation of this report.

3.4 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

No information was conveyed to URS that the property value of the subject property has been reduced due to environmental issues.

3.5 OWNER, SITE MANAGER AND OCCUPANT INFORMATION

The Project area along the San Joaquin River between the Chowchilla Bifurcation Structures and the Mendota Dam is owned by the United States Bureau of Reclamation and the California Department of Water Resources. Portions of the existing river corridor in Reach 2B are privately owned.

3.6 REASON FOR CONDUCTING PHASE I ESA

The SJRRP Team indicated that this Phase I ESA was requested in connection with the San Joaquin River Restoration Project Alternatives EIR.

3.7 OTHER USER-PROVIDED INFORMATION

URS reviewed the “San Joaquin River Restoration Program Draft Program Environmental Impact Statement/Report” prepared by SJRRP, dated April 2011. The report indicated the following:

- One site in Reach 2 is listed in the State Water Resources Control Board (SWRCB) Geotracker database. The Mendota Landfill is considered by SWRCB to have open status and potential volatile organic compound contamination.

The open status and potential contamination of the Mendota Landfill was not confirmed EDR, which states that the Mendota Solid Waste Disposal facility was a permitted solid waste disposal site that was clean closed on December 31, 1981. Since the landfill is not within the boundaries of the Project area, and it is downgradient of the Project area, the Mendota Landfill is not considered a potential REC.

No sites listed in the Department of Toxic Substances Control Board (DTSC) Cortese List, SWRCB Geotracker and Environmental Protection Agency (EPA) Enviromapper databases are located in the Chowchilla Bypass portion of the Project area. Contaminated sites, however, are likely to occur near tributaries of the Chowchilla Bypass.

4.1 STANDARD ENVIRONMENTAL RECORDS

A regulatory database search report was prepared for the subject property by EDR on October 31, 2011 in accordance with the ASTM recommended guidelines, and is presented in Attachment A in electronic format. EDR reviews databases compiled by federal, state, and local governmental agencies. URS reviewed the EDR database to evaluate whether activities on or near the subject property have the potential to create a REC on the subject property. The EDR report searches properties within a specified distance that in some instances extends beyond the ASTM standard search radii.

The regional topography in the vicinity of the subject property has an overall slope to the west per the USGS topographic map. Therefore, as shallow groundwater flow would be expected to generally follow the topographic gradient, groundwater is expected to predominantly flow to the west. Therefore, sites located east of the Project area are considered to be topographically and hydrologically upgradient.

The goal of reviewing the database report is to identify facilities that have known and documented environmental problems that may negatively impact the subject property. Subject property and adjacent property listings are discussed below. Other listed facilities, which are not listed in the database as “closed” or “no further action” (including “No Further Remedial Action Planned” or NFRAP), or are located topographically upgradient of the subject property, within the database search distances are discussed below.

The following sites within the Project area, or on the boundary of the specified Project area, were identified in the database report:

- Paramount Farming Company, 10317 Eastside Drive, Firebaugh, CA
- Mendota Solid Waste Disposal, ½ mile east of Bass Avenue, Mendota, CA
- Frank A Logoluso Farms, 2369 San Mateo Avenue, Mendota, CA
- AES Mendota/Covanta Mendota LP, 400 Guillen Parkway, Mendota, CA

Paramount Farming Company at 10317 Eastside Drive in Firebaugh, CA, is located on the northern boundary of the Project area. The site was listed in the HAZNET database, a DTSC database of hazardous waste manifests. The site has been identified as having 2.4 tons of asbestos containing waste, and the disposal method is listed as landfill or surface impoundment that will be closed as a landfill (to include on-site treatment and/or stabilization). The site represents a potential environmental concern to the Project area due to the presence of asbestos containing waste.

Mendota Solid Waste Disposal is located half a mile east of Bass Avenue, near the Fresno Slough in Mendota, CA. The site is located on the southwestern boundary of the Project area, near the Mendota Pool. The site was listed in the Integrated Waste Management Board’s Solid Waste Information System (SWIS) database as a Solid Waste Facility/Landfill (SWF/LF) site. The Mendota Solid Waste Disposal facility was a permitted solid waste disposal site that was clean closed on December 31, 1981. The site is not expected to represent an environmental concern to the Project area.

Frank A. Logoluso Farms at 2369 San Mateo Avenue in Mendota, CA, is located within the Project area, south of the San Joaquin River. The site was listed in the HAZNET database, a DTSC database of hazardous waste manifests. The site has been identified as having 0.3753 tons of waste oil and mixed oil. The site is not expected to represent an environmental concern to the Project area.

AES Mendota/Covanta Mendota LP at 400 Guillen Parkway in Mendota, CA, is located on the western boundary of the Project area, near Mendota Airport. The biomass power plant was listed in several federal and California databases, as described below:

1. Federal Records

- Resource Conservation and Recovery Act (RCRA) Small Quantity Generator (RCRA-SQG) with no violations.
- Facility Index System (FINDS).

2. State and Local Records

- California Water Resources Control Board (SWRCB) Waste Management Unit Database System (WMUDS/SWAT) -- The facility generates waste as part of the industrial/manufacturing process.
- SWRCB Waste Discharge System (WDS) -- The facility treats and/or disposes of liquid or semisolid wastes as part of its industrial/manufacturing process, and has an Active status to have a continuous or seasonal discharge that is under Waste Discharge Requirements.
- SWRCB Spills, Leaks, Investigations and Cleanup (SLIC) program – The facility has had an open site assessment status with the Central Valley RWQCB since April 20, 2010, due to an unauthorized release from an underground storage tank. Corrective action is underway.
- CUPA Fresno – The facility is listed as a large hazardous materials handler and large quantity hazardous waste generator; contaminated site; and has aboveground storage tank (AST) capacity of 1,320 to 9,999 gallons.
- AST – The facility has an AST capacity of 1,320 gallons.
- SWRCB Enforcement Actions (ENF) – Notice of violation (NOV) issued on April 12, 2004 for numerous violations of Waste Discharge Requirements, including freeboard level being less than 2 feet, primary liner leaking, and unauthorized discharge to land from sprayer. An unknown NOV was issued on September 15, 2000. An additional NOV was issued on August 24, 2000, in regards to a workplan by Geological Technics, Inc. to address an NOV received on June 26, 2000. The NOV requested additional documentation of a concrete cover. The June 26, 2000 NOV was in regards to WDR violations in which electrical conductance, total dissolved solids, chloride, and sulfate concentrations in downgradient well MW-2 had increased to above background levels. An NOV issued on June 12, 2000 indicated that there were five violations of the WDR Order No. 97-135.
- HAZNET -- The facility was listed in the HAZNET database, a DTSC database of hazardous waste manifests. In 2000, the facility was identified as having 1.2718 tons

of waste oil and mixed oil. In 1999, the facility was identified as having 0.3336 tons of waste oil and mixed oil; 0.6545 tons of aqueous solution with total organic residues less than 10 percent; 0.1328 tons of liquids with halogenated organic compounds; and 0.0417 tons of hydrocarbon solvents (benzene, hexane, Stoddard, etc.).

- Toxics and criteria pollutant emissions data collected by the Air Resources Board (ARB) and local air pollution agencies (EMI) – The facility was listed as having annual air emissions of total organic hydrocarbon gases, reactive organic gases, carbon monoxide emissions, oxides of nitrogen, oxides of sulphur, particulate matter, and particulate matter less than 10 micrometers.

The AES Mendota/Covanta Mendota LP facility is located downgradient of the Project area and on the southwestern boundary. The site is not expected to represent a potential environmental concern to the Project area.

The following sites adjacent to the Project area were identified in the database report:

- Mendota Junior High School Site, 1200 Belmont Avenue, Mendota, CA

The Mendota Junior High School Site at 1200 Belmont Avenue in Mendota, CA is located approximately 0.75 miles downgradient of the southwestern corner of the Project area. The site was listed in the state school (SCH) database containing proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. The site was also listed in DTSC's ENVIROSTOR database of sites that have known contamination. The past use of the site was agricultural, row crops. A Preliminary Endangerment Assessment Report was prepared on May 22, 2006. The site received a No Further Action status on May 22, 2006. Since the site is 0.75 miles downgradient of the southwestern corner of the Project area, the site is not expected to represent an environmental concern to the Project area.

Forty unmappable/orphan sites were listed in the EDR report. Due to poor or inadequate address information they could not be accurately located by EDR. Based on URS' review of available address information, approximately 3 of the 40 unmappable/orphan sites may be located within one mile of the Project area. These sites include the following:

- Ray Baldrige, 6353 Road 8 ½, Firebaugh, CA
- Silver Creek Packing Company Shop, 2158 Bass Avenue, Mendota, CA
- Mendota Site, 1 mile northeast of Highway 33

Ray Baldrige at 6353 Road 8 ½ in Firebaugh, CA is located within one mile northwest and downgradient of the Project area. This site is listed in the state SWEEPS underground storage tank (UST) database maintained by the SWRCB, because it has an UST. Since the site is downgradient of the northwestern corner of the Project area, the site is not expected to represent an environmental concern to the Project area.

Silver Creek Packing Company Shop at 2158 Bass Avenue in Mendota, CA is located within one mile west and downgradient of the Project area. The site is listed in the HIST CORTESE, LUST and HIST LUST databases because it had a leaking UST (LUST), according to the EDR report. Since the site is downgradient of the western boundary of the Project area, the site is not expected to represent an environmental concern to the Project area.

The Mendota Site located one mile northeast of Highway 33 in Mendota, CA is located within one mile west and downgradient of the Project area. The site is listed in the CERC-NFRAP database, a federal database of Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) No Further Remedial Action Planned sites. Since the site is downgradient of the western boundary of the Project area, the site is not expected to represent an environmental concern to the Project area.

4.2 ADDITIONAL ENVIRONMENTAL RECORD SOURCES

URS reviewed the SWRCB GeoTracker, DTSC Envirostor and EPA Envirofacts databases for additional site information. The SWRCB GeoTracker database listed several other LUST sites within 1 mile of the southwestern boundary of the Project area; however, these sites are downgradient and sufficiently far enough away from the project area that they are not expected to represent an environmental concern to the Project area.

URS did not attempt to contact public agencies for this Phase I ESA.

4.3 HISTORICAL USE INFORMATION

Based on a review of the available historical documentation, the Project area was undeveloped land used for agricultural purposes from at least 1925 until the 1950s. From the late 1950s until the present, the Project area was developed with the Mendota Dam, the Mendota Pool, the Chowchilla Bifurcation Structures, sewage treatment plant, levees, marshlands, and farmland.

Copies of pertinent portions of historical research documents reviewed and discussed below are presented in Attachment B in electronic format.

4.4 AERIAL PHOTOGRAPHS

URS ordered historical aerial photographs covering the subject property from EDR for the years 1937, 1955, 1965, 1974, 1981, 1987, 1998, 2009 and 2010. The aerial photographs were reviewed to identify potential sources of visible contamination at the time the photographs were taken. A summary evaluation of the above referenced aerial photographs follows:

- 1937** – Review of the 1937 aerial photo revealed that the Project area and adjacent properties were undeveloped and agricultural/ranch land. State Highways 130 and 180 were present near the slough. In addition, unimproved roads criss-crossed the Project area.
- 1955** – Many changes to the Project area occurred between 1937 and 1955. The Mendota Dam was depicted in the photo, and a sewage disposal facility with one building and two ponds had been built adjacent to the Fresno Slough. The Fresno Slough was larger than in 1937, and areas that were once shrublands along the Slough were shown as being covered in water. Mowry Lake was no longer visible. Levees were built along the eastside of the Slough and on the north and south banks of the San Joaquin River. Willow Slough was now evident north of the river, and linked to the river near a gaging station. Shrublands were more evident on the banks of the river, and the inundated areas south of the river appear to have been converted to farms. Ranches and farms were evident in the Project area.

- 1965** – The Mendota Pool was depicted, and the sewage disposal facility had one building and two pools adjacent to the Fresno Slough, south of Mendota Pool. The city of Mendota is shown, as is the small reservoir/water tank just east of the city, and gas and water wells were scattered north of the San Joaquin River. The inundated areas east of the Slough had become much smaller, and most of it had been converted to farmland. Ranches and farms were evident in the Project area. No other major changes were depicted to the Project area or adjacent properties from 1955.
- 1974** – The sewage disposal facility grew much larger between 1965 and 1974. In 1974, the facility had two buildings, and four ponds, and two to three marshland areas. The Mendota Pool had also been made larger, and the Mowry Canal was gone. Willow Slough/Chowchilla Canal north of the river had become much larger and appeared to be used as a bypass, with levees on both sides of the Canal, and a gaging station at the San Joaquin River. Formerly inundated areas east of the Fresno Slough appeared dry, and converted to farmland. A large lake/pond is shown just south of a bend in the San Joaquin River. A portion of the Mendota Airport runway is shown west of the Fresno Slough. Ranches and farmland are depicted on both sides of the river, and in the Project area.
- 1981** – The sewage disposal plant had grown much larger, and now had nine to ten ponds, and no buildings. According to the EDR report, the Mendota Solid Waste Disposal Facility (depicted in the same location as the sewage disposal plant) was closed in 1981. The Mendota Airport runway and buildings are shown west of the Fresno Slough. The Chowchilla Canal north of the river was shown and appeared to be used as a bypass, with levees on both sides of the Canal, and a gaging station at the San Joaquin River. Marshlands were still present east of the Fresno Slough, but the ponds were much smaller, if not converted to farmland. The large lake/pond shown just south of a bend in the San Joaquin River, appeared smaller and drier. Ranches and farmland are depicted on both sides of the river, and in the Project area.
- 1987** – The Mendota Solid Waste Disposal Facility (depicted in the same location as the sewage disposal plant) still had 10 ponds, but four of them were smaller, possibly buried with soil. Some kind of stadium-like structure was constructed east of the Fresno Slough and south of the Project area. The lake/pond shown just south of a bend in the San Joaquin River had nearly disappeared. No other major changes were depicted to the Project area or adjacent properties from 1981.
- 1998** – AES Mendota/Covanta Mendota LP biomass plant and associated buildings is shown west of the Fresno Slough, near Mendota Airport. The area of the former sewage disposal plant/Mendota Solid Waste Disposal Facility had undergone changes, and appeared to have numerous ponds and plots of land in the vicinity. Lines, possibly transmission lines, could be seen near the biomass plant west of the Fresno Slough. Ranches and farms were scattered throughout the Project area, and an area south of the river appeared to have been converted to vineyards. Some inundated areas were visible, but most of the land around the Fresno Slough, San Joaquin River and Chowchilla Bypass appeared to be used as farmland.
- 2009** – No other major changes were depicted to the Project area or adjacent properties from 1998.

2010 – More development is evident in the area of the former sewage disposal plant/Mendota Solid Waste Disposal Facility. Some areas of inundation are shown east of the Fresno Slough, but no other major changes were depicted to the Project area or adjacent properties from 2009.

Based on a review of the historical aerial photographs, no RECs were identified.

4.5 TOPOGRAPHIC MAPS

URS reviewed USGS 15-minute series topographic maps of the Tranquility, California quadrangle dated 1946, and the Firebaugh, California quadrangle provided by EDR dated 1948, 1959 and 1962; and 7.5-minute series topographic maps of the Tranquility, California quadrangle dated 1924, 1947, 1948, 1956 and 1984; the Firebaugh, California quadrangle dated 1956 and 1984; and the Mendota Dam, California quadrangle dated 1924, 1947, 1948, 1956, 1984. A summary evaluation of the topographic maps follows:

- 1924** – The Project area and adjacent properties were depicted as undeveloped and agricultural/ranch land. The Fresno Slough was named the Kings River Slough in 1924. An unnamed dam was located in the same location as the present Mendota Dam, and was at an elevation of 160 feet above mls. Ponds and lakes are shown east of the Slough, and sandy soil is shown on the banks of the San Joaquin River north of the dam. State Highways 130 and 180 were present near the Kings River Slough, and the Southern Pacific Railroad crossed over the Kings River Slough south of the Project area. The Southern Pacific Railroad route ran north and south and east and west through the Project area. In addition, unimproved roads criss-crossed the Project area. Pomona Ranch and White House Ranch were depicted north of the San Joaquin River, likely within the Project area. Herminghaus Ranch was depicted southeast of the Project area, but north of State Highway 180. Mowry Lake was shown just south of the San Joaquin River, and the Columbia Canal and the Mowry Canal were shown north and south and of the river, respectively.
- 1946** – The Project area and adjacent properties were still depicted as undeveloped and agricultural/ranch land. Kings River Slough name was changed to the Fresno Slough. The town of Tranquility had been built, and many unimproved roads criss-crossed the area south of Whites Bridge Road/State Highway 180 and north of Tranquility. The city street blocks of Tranquility are evident south of the Fresno Slough. The Fresno Slough By-Pass was depicted south of Southern Pacific Railroad, near the town of Tranquility. Levees were built south and north of the Fresno Slough. Heminghuas Ranch had two buildings in 1946.
- 1947** – The dam on the San Joaquin River was labeled the Mendota Dam. The town of Mendota had been built, and the Chowchilla Canal was depicted north of the San Joaquin River. The Pomona Ranch north of the river had grown and increased the number of buildings, and the Mowry Ranch was shown on the southern bank of the San Joaquin River, east of the Fresno Slough. Small levees are evident between the Mowry Ranch and the Mowry Canal. Ponds and lakes are depicted east of the Slough and south of the river. Gas wells are shown north of the Project area.

- 1948** – Levees were built on both the north and south banks of the San Joaquin River. Shrubland was depicted around the San Joaquin River and the Fresno Slough. Sandy soil is shown on the banks of the San Joaquin River north of the Mendota Dam. Lakes and ponds were present east of the Fresno Slough and south of the San Joaquin River. Little else had changed from 1947.
- 1956** – Many changes to the Project area occurred between 1948 and 1956. The Mendota Pool was depicted, and a gaging station had been installed on the Mendota Dam. The Mendota Dam elevation had decreased to 155 ft above msl. A sewage disposal facility with one building and two ponds had been built adjacent to the Fresno Slough, south of Mendota Pool. The Fresno Slough was larger than in previous years, and areas that were once shrublands along the Slough were shown as being covered in water. The lakes/ponds that were adjacent to the east of the Slough had become larger, and channels were evident linking the Slough to the lakes/ponds. Mowry Lake was no longer visible. Levees were built along the eastside of the Slough and on the north and south banks of the San Joaquin River. Shrublands were more evident on the banks of the river, and the inundated areas east of the Slough and south of the river were gone. The levees had pumps, and the levees joined east of the Slough and south of the river. A flume pump was added to the Columbia Canal on the north bank of the river. The Delta-Mendota Canal with a lock was depicted southwest of the Mendota Pool. Helm Ditch was constructed west of the river and north of Mendota Dam near Helm Ranch. Willow Slough was now evident north of the river, and linked to the river near the gaging station. Mowry Ranch was still present, and Pomona Ranch had grown and added more buildings. Yearout Ranch was shown north of State Highway 180 and east of the Slough. The town of Mendota grew larger, and a reservoir was located east of the town. Gas and water wells were scattered north of the San Joaquin River. The land south of Whites Bridge Road/State Highway 180 and east of the Fresno Slough near the town of Tranquility had been converted into marshland and ponds. The land north of State Highway 180 and east of the Slough had been turned into fish rearing ponds and marshland.
- 1962** – No major changes were depicted to the Project area or adjacent properties. The town of Mendota had grown larger. Pomona Ranch had downsized, and Mowry Ranch was still present.
- 1984** – The sewage disposal plant had grown much larger, and now had nine to ten ponds. According to the EDR report, the Mendota Solid Waste Disposal (depicted in the same location as the sewage disposal plant) was closed in 1981. The Mendota Pool had also been made larger, and the Mowry Canal was gone. The Chowchilla Canal north of the river had become much larger and appeared to be used as a bypass. Mowry Ranch had grown to three buildings, Helm Ranch had grown larger and Pomona Ranch had gotten smaller. The fish rearing ponds north of State Highway 180 had grown much larger than in 1962, and it appears that vineyards had been planted near Yearout Ranch and on both sides of Southern Pacific Railroad. Marshlands were still present east of the Fresno Slough, but the ponds were gone. The area east of Fresno Slough and south of State Highway 180 had been designated Alkali Sink Ecological Reserve.

Based on a review of the historical topographic maps, no RECs were identified.

4.6 SANBORN FIRE INSURANCE MAPS

URS ordered Sanborn Fire Insurance Maps (Sanborns) for the Project area from EDR. EDR's response indicated that Sanborn map coverage is not available for the subject property and its vicinity.

4.7 CITY DIRECTORIES

URS did not request historical city directory information from EDR for the Project area, since the Project area is so large, and no cities are present within the Project area.

5.1 METHODOLOGY AND LIMITING CONDITIONS

Mr. Joe Morgan of URS' Oakland office toured the Site on August 2, 2011 as part of an EIR team tour. The tour was conducted by the team leaders from Bureau of Reclamation, Cardno Entrix and URS. The weather was clear and hot.

The tour started at the Mendota Dam/Pool. The team observed the Mendota Dam and the Mendota Pool. The team also observed the nearby downstream portion of the San Joaquin River past the Dam with riverine vegetation along the riverbank, a public access point, and the surrounding agricultural land devoted to row crops. The team also observed a small residential community downgradient of the Mendota Dam.

The team then drove to the Chowchilla Bifurcation Structure and observed: the two dams, the up- and down-stream portion of the river, and the Chowchilla By-Pass. The Chowchilla By-Pass was dry during the tour, as it is only used for flood control purposes. The banks of the river were lined with riverine vegetation. All three Dams within the project area are within fenced enclosures with locked gates, and are not open to the public.

The surrounding land is used for agricultural purposes, including: row crops, orchards, and vineyards. Two to three farmhouses with assorted farm buildings were noted on the southeast portion of the project site. One outbuilding was constructed of older style sheet metal, likely painted with lead containing paint. The same farmstead may have an underground storage tank.

5.2 INTERIOR AND EXTERIOR OBSERVATIONS

The Mendota Dam dams the San Joaquin River and creates the Mendota Pool, which is used to support the surrounding agricultural land uses. Chowchilla Bifurcation Structures are used for flood control purposes by the California Department of Water Resources. The normal San Joaquin river flow is released into the San Joaquin river channel. Under flood conditions, the bifurcation dam is opened to split the flow between the San Joaquin River channel and the normally dry Chowchilla by-pass channel.

Visual observations were made of the surrounding properties to identify potential sources of environmental concern. Properties in the immediate vicinity of the subject property were observed during the site tour. Land uses in the immediate vicinity of the subject property were mostly agricultural. A small cluster of homes was noted across the road downstream from the Mendota Dam. A public park was noted upstream from the Mendota Dam.

5.3 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

Potential hazardous materials likely stored and used within the project area include the following categories:

- Historical and currently used herbicides and pesticides.
- Fuels, such as diesel and gasoline.
- Lead-based paint.
- Asbestos containing materials.

- Solvents for solvent plastic-pipe welding.
- Anti-freeze and lubricants for farm equipment and family vehicles.
- Lead acid batteries.
- Fertilizers and other soil amendments.
- Electronic equipment: transformers, transformer oils.

5.4 UNDERGROUND/ABOVEGROUND STORAGE TANKS

URS observed one potential underground storage tank (USTs) vent pipe. The Project area is not listed in the environmental databases as having registered USTs.

5.5 PCB-CONTAINING AND HYDRAULIC EQUIPMENT

One transformer was noted by the farmhouses on the eastern end of the project site. No other transformers were observed by URS on the subject property. A number of electrical service lines were noted on the subject property to service the bifurcation structure, farm houses, and irrigation pumps. No high-tension power lines, utility transmission equipment, or substations were observed on or adjacent to the subject property. Pacific Gas and Electric (PG&E) has removed all PCBs from their system, so only privately-owned old electrical equipment is suspect for PCB containing di-electric fluids.

5.6 SOLID AND HAZARDOUS WASTES

Solid wastes generated by the families that live in the Project area are disposed of by the local garbage company, Madera Disposal Inc.

5.7 DRAINS AND SUMPS

No drains or sumps were observed. Stormwater ditches were observed alongside the roads in the area.

5.8 WASTEWATER

Sanitary wastewater is likely discharged to the homeowners' septic tanks.

5.9 UTILITIES

URS assumes that farm houses use wells for domestic and agricultural water supply. Electric services are provided by PG&E. Most homes in the agricultural area are likely serviced by propane gas for home heating.

5.10 WELLS

A number of agricultural water wells were observed during the site tour. URS assumes that the two to three farm houses are served by wells for drinking water. URS ordered a Well Search

Report from EDR (Attachment C). Numerous state water wells and two state oil and gas wells identified as being located within the Project area. An additional six state oil and gas wells are located within a one mile radius of the Project area.

5.11 PITS, PONDS, AND LAGOONS

No pits, ponds or lagoons were observed on the subject property during the property visit.

5.12 OTHER PHYSICAL EVIDENCE OF CONTAMINATION

No physical evidence of contamination was observed on the subject property during URS' site reconnaissance.

URS has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-05 of the Mendota Pool Bypass and Reach 2B Improvements Project located in the area of the Chowchilla Bifurcation Structures and downstream to Mendota Dam in Mendota, Fresno and Madera Counties, California (subject property). Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report. This assessment has revealed two RECs or HRECs in connection with the subject property:

- Paramount Farming Company at 10317 Eastside Drive in Firebaugh, CA, is located on the northern boundary of the Project area. The site has been identified as having 2.4 tons of asbestos containing waste, and the disposal method is listed as landfill or surface impoundment that will be closed as a landfill (to include on-site treatment and/or stabilization). The site represents a potential environmental concern to the Project area due to the presence of asbestos containing waste.
- Because the Project area was historically used as farmland, pesticide/herbicide residuals may be present in the soil. However, features were not identified (e.g., impoundments, bulk storage facilities or crop dusting air strips) that suggested the handling or storage of significant quantities of pesticides and/or herbicides in the Project area. The Project area represents a historical potential environmental concern to the Project area due to potential for pesticide/herbicide residuals may be present in the soil.

During this assessment, URS identified no significant data gaps in reasonably ascertainable information reviewed and described in this report regarding the Project area, which would be expected to impact our conclusions.

SECTION SEVEN

Signatures of Environmental Professionals

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

April Ann Giangerelli

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

EXECUTIVE SUMMARY

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2011 has revealed that there is 1 RCRA-SQG site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>	<u>Page</u>
<i>AES MENDOTA</i>	<i>400 GUILLEN PARKWAY</i>	<i>4</i>	<i>5</i>

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 04/14/2010 has revealed that there is 1 FINDS site within the searched area.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, and dated 12/31/2010 has revealed that there are 3 HAZNET sites within the searched area.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 09/13/2011 has revealed that there is 1 ENVIROSTOR site within the searched area.

Environmental Interest/Information System
 Not reported

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US Emissions & Generation Resource Database (EGRID) contains data on emissions and resource mix for virtually every power plant and company that generates electricity in the United States.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 06/30/2011	Source: EPA
Date Data Arrived at EDR: 07/12/2011	Telephone: N/A
Date Made Active in Reports: 09/29/2011	Last EDR Contact: 10/12/2011
Number of Days to Update: 79	Next Scheduled EDR Contact: 01/23/2012
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/30/2011	Source: EPA
Date Data Arrived at EDR: 07/12/2011	Telephone: N/A
Date Made Active in Reports: 09/29/2011	Last EDR Contact: 10/12/2011
Number of Days to Update: 79	Next Scheduled EDR Contact: 01/23/2012
	Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 08/15/2011
Number of Days to Update: 56	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/25/2011	Source: EPA
Date Data Arrived at EDR: 03/01/2011	Telephone: 703-412-9810
Date Made Active in Reports: 05/02/2011	Last EDR Contact: 09/01/2011
Number of Days to Update: 62	Next Scheduled EDR Contact: 12/12/2011
	Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 02/25/2011	Source: EPA
Date Data Arrived at EDR: 03/01/2011	Telephone: 703-412-9810
Date Made Active in Reports: 05/02/2011	Last EDR Contact: 09/01/2011
Number of Days to Update: 62	Next Scheduled EDR Contact: 12/12/2011
	Data Release Frequency: Quarterly

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 09/09/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/16/2011	Telephone: 202-564-6023

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 03/09/2011	Source: EPA
Date Data Arrived at EDR: 03/15/2011	Telephone: 800-424-9346
Date Made Active in Reports: 06/14/2011	Last EDR Contact: 08/15/2011
Number of Days to Update: 91	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: Quarterly

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/15/2011
Date Data Arrived at EDR: 07/07/2011
Date Made Active in Reports: 08/08/2011
Number of Days to Update: 32

HMIRS: Hazardous Materials Information Reporting System

Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 07/05/2011	Source: U.S. Department of Transportation
Date Data Arrived at EDR: 07/05/2011	Telephone: 202-366-4555
Date Made Active in Reports: 09/30/2011	Last EDR Contact: 10/04/2011
Number of Days to Update: 87	Next Scheduled EDR Contact: 01/16/2012
	Data Release Frequency: Annually

DOT OPS: Incident and Accident Data

Department of Transportation, Office of Pipeline Safety Incident and Accident data.

Date of Government Version: 01/12/2011	Source: Department of Transportation, Office of Pipeline Safety
Date Data Arrived at EDR: 02/11/2011	Telephone: 202-366-4595
Date Made Active in Reports: 05/02/2011	Last EDR Contact: 08/09/2011
Number of Days to Update: 80	Next Scheduled EDR Contact: 11/21/2011
	Data Release Frequency: Varies

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 06/27/2011

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 04/14/2010	Source: EPA
Date Data Arrived at EDR: 04/16/2010	Telephone: (415) 947-8000
Date Made Active in Reports: 05/27/2010	Last EDR Contact: 09/13/2011
Number of Days to Update: 41	Next Scheduled EDR Contact: 12/26/2011
	Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104
Date Made Active in Reports: 08/07/1995	Last EDR Contact: 06/02/2008
Number of Days to Update: 35	Next Scheduled EDR Contact: 09/01/2008

Number of Days to Update: 36	Next Scheduled EDR Contact: 01/23/2012
	Data Release Frequency: Varies

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 09/01/2007	Source: Drug Enforcement Administration

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services
Telephone: 916-657-4041

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.
