RECLAMATION

Blue Mesa Reservoir 2019 Area and Capacity Tables

Colorado River Storage Project, Colorado

Mission Statements

The Department of the Interior (DOI) conserves and manages the Nation's natural resources and cultural heritage for the benefit and enjoyment of the American people, provides scientific and other information about natural resources and natural hazards to address societal challenges and create opportunities for the American people, and honors the Nation's trust responsibilities or special commitments to American Indians, Alaska Natives, and affiliated island communities to help them prosper.

The mission of the Bureau of Reclamation is to manage, develop, and protect water and related resources in an environmentally and economically sound manner in the interest of the American public.

Acronyms and Abbreviations

ACAP	Area-Capacity
GIS	Geographic Information System
GPS	Global Positioning System
NAD83	North American Datum, established 1983
NED	National Elevation Dataset
NGVD29	National Geodetic Vertical Datum, established 1929
RTK	Real-Time Kinematic
RPVD	Reclamation Project Vertical Datum

Introduction

The surface area and storage capacity tables for Blue Mesa Reservoir were generated from the 2019 survey August-September 2019. Reservoir surface areas and capacities at 1-foot increments were first computed using the ArcGIS ACAP toolset, developed at Reclamation. Reclamation’s Area-Capacity Program, ACAP V2.0 (Huang, 2020), was then used to generate the area and capacity tables at 1-foot, 0.1-foot, and 0.01-foot increments for the full range of reservoir elevations. All data reference the sedimentation survey report (Hilldale, 2020).

The reservoir storage capacity interpolates the reservoir storage capacity between 1-foot intervals using the following equation:

$$V = A_1 + A_2(y - y_b) + A_3(y - y_b)^2$$

where: V = storage capacity (acre-feet)
 y = reservoir elevation,
 y_b = reservoir elevation at bottom of elevation increment,
 A_1 = storage capacity at elevation y_b (acre-feet),
 A_2 = coefficient for linear rate of increase in storage capacity which also equals surface area at elevation y_b (acres), and
 A_3 = coefficient for nonlinear rate of increase in storage capacity, computed by enforcing that $V = V_t$, where V_t is the volume at the top of the interval (y_t):

$$A_3 = \frac{V_t - A_1 - A_2(y_t - y_b)}{(y_t - y_b)^2}$$

The program uses the linear interpolation method to predict the reservoir surface area between 1-foot intervals using the following equation over a certain elevation interval:

$$S = B_1 + 2B_2(y - y_b)$$

where: S = surface area (acres),
 y = reservoir elevation,
 y_b = reservoir elevation at bottom of elevation increment,
 B_1 = surface area at elevation y_b (acres), $B_1 = A_2$, and
 B_2 = coefficient (feet) for linear rate of increase in surface area, computed by enforcing that $S = S_t$, where S_t is the area at the top of the interval (y_t):

Blue Mesa Reservoir 2019 Area Capacity Tables

$$B_2 = \frac{S_t - B_1}{2(y_t - y_b)}$$

This method ensures that the surface areas and capacities as determined from GIS software at the 1-foot intervals are not changed and there is a smooth transition in the interpolated values at the 0.01-foot intervals.

Equation Parameters

Reservoir storage capacity tables using the equation parameters for the full range of reservoir elevations is presented below in the Reclamation Project Vertical Datum (RPVD).

Survey Basis and Datum

The 2019 Blue Mesa Reservoir survey was conducted during August and September 2019 from a boat using an Odom MB1 multibeam depth sounder to continuously measure water depths. The horizontal position of the moving boat was continually tracked using RTK GPS. These bathymetric data were combined with LiDAR data collected above water during May 2019 to produce a digital surface of the reservoir bottom surface (Hilldale, 2020).

All elevation data for these tables are in feet relative to the local Reclamation Project Vertical Datum (RPVD) that is 4.71 feet lower than the North American Vertical Datum of 1988 (NAVD88). The National Geodetic Vertical Datum of 1929 (NGVD29) and 4.86 feet lower than NAVD88.

Reservoir surface area and capacity from elevation 7,195 through 7,528 feet (RPVD) were computed from the 2019 bathymetric survey. The surface areas above approximate elevation 7,490 feet (RPVD) were computed from 2019 LiDAR.

Data Results

The reservoir surface area and storage capacity results are presented graphically (Figure 1) and in a series of tables in 1-foot, 0.1-foot, and 0.01-foot elevation increments.

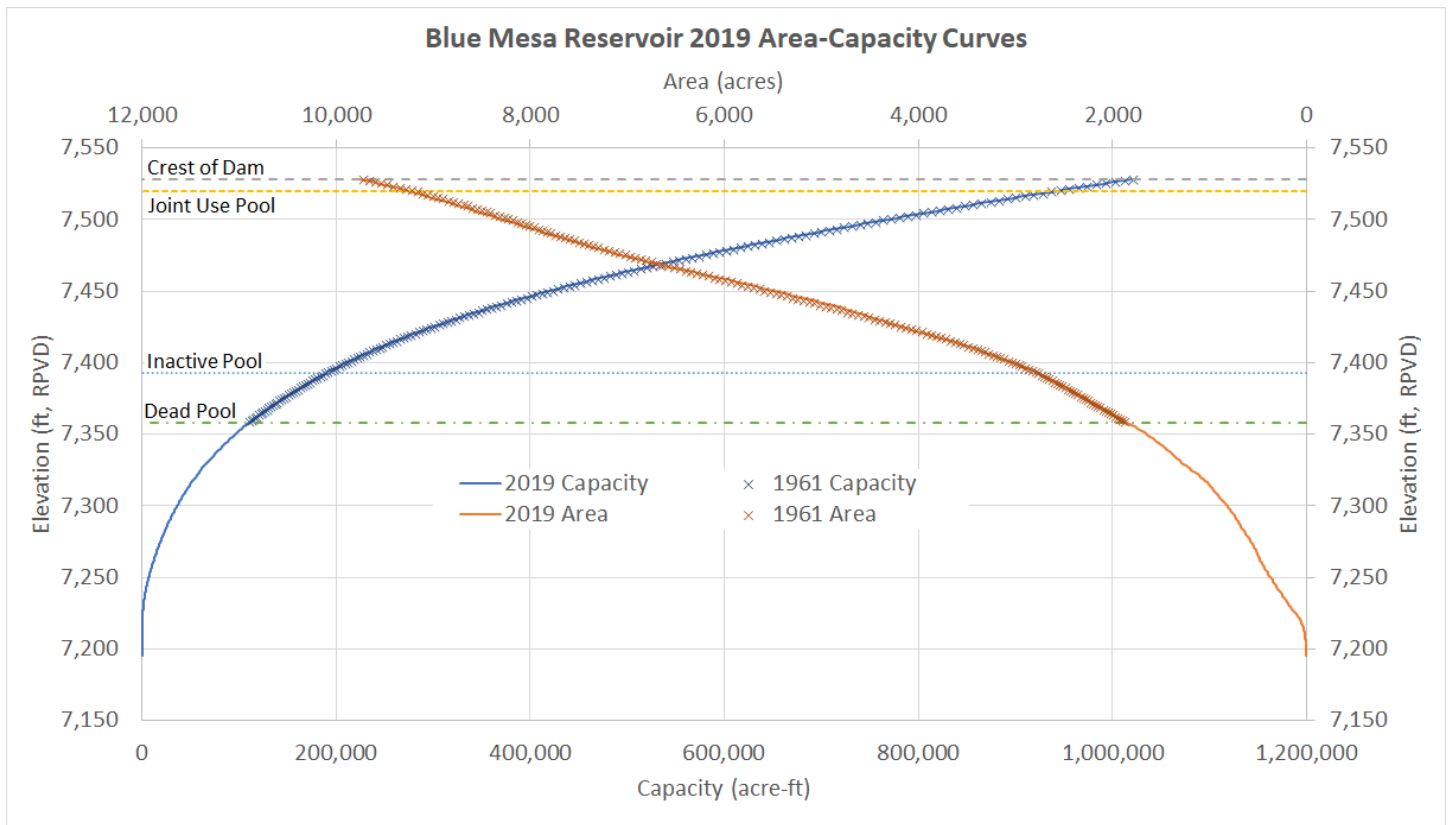

Figure 1. Blue Mesa Reservoir surface area and storage capacity curves based on the 2019 survey. Use the elevation axes to find the storage capacity (blue curve, bottom axis) or surface area (orange curve, top axis) for a given reservoir elevation.

Area Table at 1-Foot Increments

2019 area-capacity tables are in NGVD29 vertical datum.

The area table is in acres. The elevation increment is one foot.

Area Table at 0.1-foot increments

The area table is in acres. The elevation increment is one-tenth of a foot.

Capacity Table at 0.1-Foot Increments

The capacity table is in acre feet. The elevation increment is one tenth of one foot.
