Elephant Butte Reservoir

2017 & 2019 Area and Capacity Tables

U.S. Department of the Interior
Bureau of Reclamation
Technical Service Center
Sedimentation and River Hydraulics Group
Denver, Colorado

December 2019

Mission Statements

The Department of the Interior conserves and manages the Nation's natural resources and cultural heritage for the benefit and enjoyment of the American people, provides scientific and other information about natural resources and natural hazards to address societal challenges and create opportunities for the American people, and honors the Nation's trust responsibilities or special commitments to American Indians, Alaska Natives, and affiliated island communities to help them prosper.

The mission of the Bureau of Reclamation is to manage, develop, and protect water and related resources in an environmentally and economically sound manner in the interest of the American public.

Introduction

The surface area and storage capacity tables for Elephant Butte Reservoir were generated as a product from the 2017 and 2019 surveys (Randle and Benoit, 2020). Reclamation's Area-Capacity (ACAP) Program, 1985 Version (Reclamation, 1985) was used to generate the tables at 1-foot, 0.1-foot, and 0.01-foot increments for the full range of reservoir elevations. Horizontal surface areas at 1-foot increments are computed using geographic information system software. Data pairs of reservoir elevation and surface area are input to the ACAP program to compute the storage capacity at these 1-foot increments and then interpolate surface areas and storage capacities at 0.01-foot increments between each 1-foot interval. The program uses the least squares method to predict the reservoir storage capacity between 1-foot intervals using the following equation over a certain elevation interval:

$$V = A_1 + A_2(y - y_b) + A_3(y - y_b)^2$$

where: V = storage capacity (acre-feet)

y = reservoir elevation

y_b = reservoir elevation at bottom of elevation increment

A_1 = intercept and storage capacity at elevation y_b (acre-feet)

A_2 = surface area at elevation y_b (acres) and coefficient for linear rate of increase in storage capacity

A_3 = coefficient (feet) for nonlinear rate of increase in storage capacity

The reservoir surface area is computed from the derivative of the volume equation:

$$S = A_2 + 2A_3(y - y_b)$$

where: S = surface area (acres)

This method ensures that the surface areas (determined using GIS software), and the corresponding storage capacities, at the 1-foot intervals are not changed and there is a smooth transition in the interpolated values at the 0.01-foot intervals.

Equation Parameters

Reservoir storage capacity tables using the equation parameters for the full range of reservoir elevations is presented below in NGVD29 Vertical Datum:

EQUATION NUMBER	ELEVATION BASE	CAPACITY BASE	COEFFICIENT A1 (INTERCEPT)	COEFFICIENT A2 (1 ST TERM)	COEFFICIENT A3 (2 ND TERM)

Survey Basis and Datum

The bathymetric survey of Elephant Butte Reservoir was conducted during June 2017 from a boat using a multibeam depth sounder to continuously measure water depths. The horizontal position of the moving boat was continually tracked using RTK GPS (Randle and Benoit, 2020). These bathymetric data were combined with data from a LiDAR survey of above water topography during January 2019 to produce a digital surface of the reservoir bottom surface.

All elevation data for these tables are in feet relative to the local Reclamation project vertical datum (RPVD) that is 45.0 feet lower than the North American Vertical Datum of 1988 (NAVD 1988, Geoid 12A). The National Geodetic Vertical Datum of 1929 (NGVD 1929) is 2.1 feet lower than NAVD 1988.

Surface areas from elevation 4234 through 4412 feet (RPVD) were computed from the 2017 & 2019 survey. In general, the surface areas below elevation 4300 feet (RPVD) are based on the 2017 bathymetric data while surface areas above elevation 4300 feet (RPVD) are based on the 2019 LiDAR survey.

Data Results

The reservoir surface area and storage capacity results are presented graphically (Figure 1) and in a series of tables in 1-foot, 0.1-foot, and 0.01-foot elevation increments.

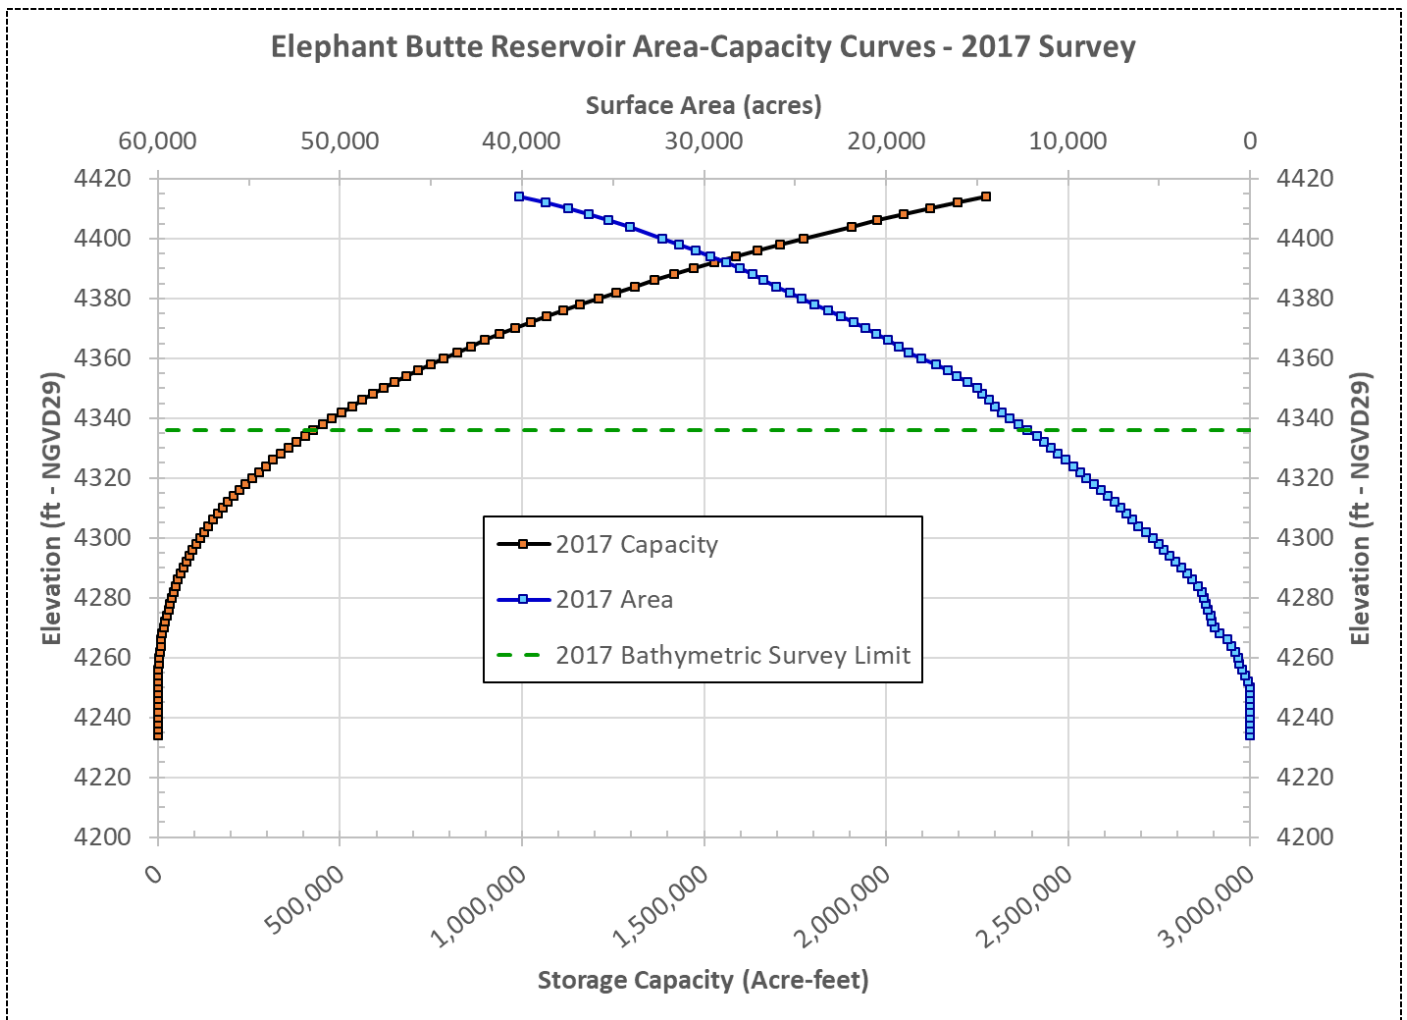

Figure 1. Elephant Butte Reservoir surface area and storage capacity curves based on the 2017 & 2019 survey. Use the elevation axes to find the storage capacity (orange curve, bottom axis) or surface area (blue curve, top axis) for a given reservoir elevation.

Area Table at 1-Foot Increments

2017 & 2019 area-capacity tables are in Reclamation project vertical datum.

The area table is in acres. The elevation increment is one foot.

Area Table at 0.1-foot increments

The area table is in acres. The elevation increment is one-tenth of a foot.
