RECLAMATION

Flaming Gorge Reservoir 2019 Area and Capacity Tables

Colorado River Storage Project, Utah
Upper Colorado Region

Mission Statements

The Department of the Interior (DOI) conserves and manages the Nation's natural resources and cultural heritage for the benefit and enjoyment of the American people, provides scientific and other information about natural resources and natural hazards to address societal challenges and create opportunities for the American people, and honors the Nation's trust responsibilities or special commitments to American Indians, Alaska Natives, and affiliated island communities to help them prosper.

The mission of the Bureau of Reclamation is to manage, develop, and protect water and related resources in an environmentally and economically sound manner in the interest of the American public.

Technical Memorandum ENV-2021-112

Flaming Gorge Reservoir 2019 Area and Capacity Tables

River Storage Project, Utah Upper Colorado Region

Prepared: Kent Collins
Hydraulic Engineer
Technical Service Center
Sedimentation and River Hydraulics Group

Checked: Robert Hilldale
Hydraulic Engineer
Technical Service Center
Sedimentation and River Hydraulics Group

Peer Review: Robert Hilldale
Hydraulic Engineer
Technical Service Center
Sedimentation and River Hydraulics Group

This review ensures that area and capacity values in the technical memorandum are verified against the analysis output. Randomly sampled area and capacity values were visually examined for completeness and accuracy. This includes a review of supporting coefficients used for the analysis of area and capacity. Summarized analysis output data were reviewed for concurrence and completeness.

Acronyms and Abbreviations

ACAP	Area-Capacity
DGPS	Differential GPS
GIS	Geographic Information System
GPS	Global Positioning System
NAD83	North American Datum, established 1983
NED	National Elevation Dataset
NGVD29	National Geodetic Vertical Datum, established 1929
RPVD	Reclamation Project Vertical Datum

Introduction

The 2019 and 2020 bathymetry were combined with LiDAR collected in May 2019 to generate a 3-dimensional digital surface of the reservoir bottom at Flaming Gorge in GIS. Reservoir surface areas and capacities were then computed at 1-foot increments, using an Arc GIS tool (ACAP Toolset 2.0) based on the ESRI Surface Volume function for the complete range of reservoir elevations (5586.0 to 6047.0 feet, Reclamation Project Vertical Datum [RPVD]). The tool interpolates the reservoir surface areas and capacities to 0.1 foot and 0.01-foot increments between each 1-foot interval following the method of Reclamation's Area-Capacity (ACAP) Program Version 2.0. ACAP V2.0 is a replacement for the ACAP85 program (Reclamation, 1985).

The reservoir storage capacity interpolates the reservoir storage capacity at the i^{th} interpolation point between 1-foot intervals using Equation 1:

$$V_i = V_b + A_b(y_i - y_b) + C(y_i - y_b)^m \quad (1)$$

where: V_i = Storage capacity (acre-feet)
 y_i = Reservoir elevation,
 y_b = Reservoir elevation at bottom of elevation increment,
 V_b = Storage capacity at elevation y_b (acre-feet),
 A_b = Surface area at elevation y_b (acres)
 C = Coefficient for nonlinear rate of increase in storage capacity
 m = Exponent of nonlinearity in the increase in storage capacity

Area is then calculated as the derivative with respect to y_i of the volume Equation 2:

$$A_i = A_b + Cm(y_i - y_b)^{m-1} \quad (2)$$

where: A_i = Surface area (acres),
 A_b = Area at elevation y_b

The coefficients C and m are chosen so that the surface areas (determined using GIS software) and the corresponding storage capacities at the 1-foot intervals are not changed and there is a smooth transition in the interpolated values at the 0.01-foot intervals. Enforcing that the storage volume (V_t) at the top of the elevation increment equals that from the GIS analysis and then solving equation (1) for C gives Equation 3:

$$C = \frac{V_t - V_b - A_b \Delta y}{\Delta y^m} \quad (3)$$

where $\Delta y = y_t - y_b$, and y_t is the elevation at the top of the elevation increment. Enforcing that the surface area (A_t) at the top of the elevation increment equals that from the GIS analysis and then substituting into Equation 2 gives Equation 4 to solve for m :

$$m = \frac{(A_t - A_b)\Delta y}{V_t - V_b - A_b\Delta y} \quad (4)$$

Survey Basis and Datum

The 2019 Flaming Gorge Reservoir survey was conducted during May and June 2019 and September 2020 from two boats, each using multibeam depth sounders to continuously measure water depths. The horizontal position of each moving boat was continually tracked using DGPS. All bathymetric data were collected in NAD83 (2011) State Plane Coordinates, Utah North Zone (FIPS 4301), US survey feet horizontally and NAVD88 (Geoid 12B), US survey feet vertically.

These bathymetric data were combined with LiDAR data collected above water during May 12-13, 2019 to produce a digital surface of the reservoir bottom (Collins and Byrne, 2021). For more information about the May 2019 LiDAR survey, see the “Project Report; Bureau of Reclamation – Flaming Gorge Reservoir; 18064” (Atlantic, 2019).

Surface areas from elevation 5586.0 (lowest bottom elevation measured during the 2019-2020 bathymetric survey¹) through 6026.0 feet (maximum elevation of 2019-2020 bathymetry data, RPVD) were computed from the 2019-2020 bathymetric survey. The surface areas above elevation 6029.3 (water surface elevation during LiDAR survey) to 6047.0 feet (dam crest elevation, RPVD) were computed from the May 2019 LiDAR provided by Atlantic (Atlantic, 2019). Between elevations 6026.0 and 6029.3 feet, the digital surface used for area and capacity computations was interpolated to generate a continuous map of the reservoir bottom.

For operational reference, the elevation of some important dam features and allocation pools are listed below in feet (RPVD):

- Dam Crest = 6047.0
- Max Water Surface = 6045.0
- Top Active Conservation = 6040.0
- Spillway Crest = 6006.0
- Top Inactive = 5871.0
- Penstock Inverts = 5845.0
- Top Dead = 5740.0
- Original Bed at Dam = 5592
- 2019 Min Bed Elev = 5586

All elevation data for these tables are in US survey feet relative to the local Reclamation project vertical datum (RPVD) measured 4.61 feet lower than NAVD88, Geoid 18. NAVD88, Geoid 18 was used to determine the difference between NAVD88 and RPVD as it was the most recent and accurate elevation model available at the time of this report.

¹ The minimum bottom elevation of 5586 feet measured during the 2019 bathymetric survey was in a relatively small, localized area near the dam and is not representative of the average bed elevation in that area. Area and capacity computations do not reflect this limited low elevation portion of the reservoir and areas and capacities do not start accumulating appreciably until elevation 5600 and above.

Equation Parameters

Reservoir storage capacity tables using the equation parameters for the full range of reservoir elevations is presented below in Reclamation Project Vertical Datum (RPVD):

EQUATION NUMBER	ELEVATION BASE	CAPACITY V_b	AREA A_b	RATE COEFF C	CAPACITY EXP m

Data Results

The reservoir surface area and storage capacity results are presented graphically (Figure 1) and in a series of tables in 1-foot, 0.1-foot, and 0.01-foot elevation increments.

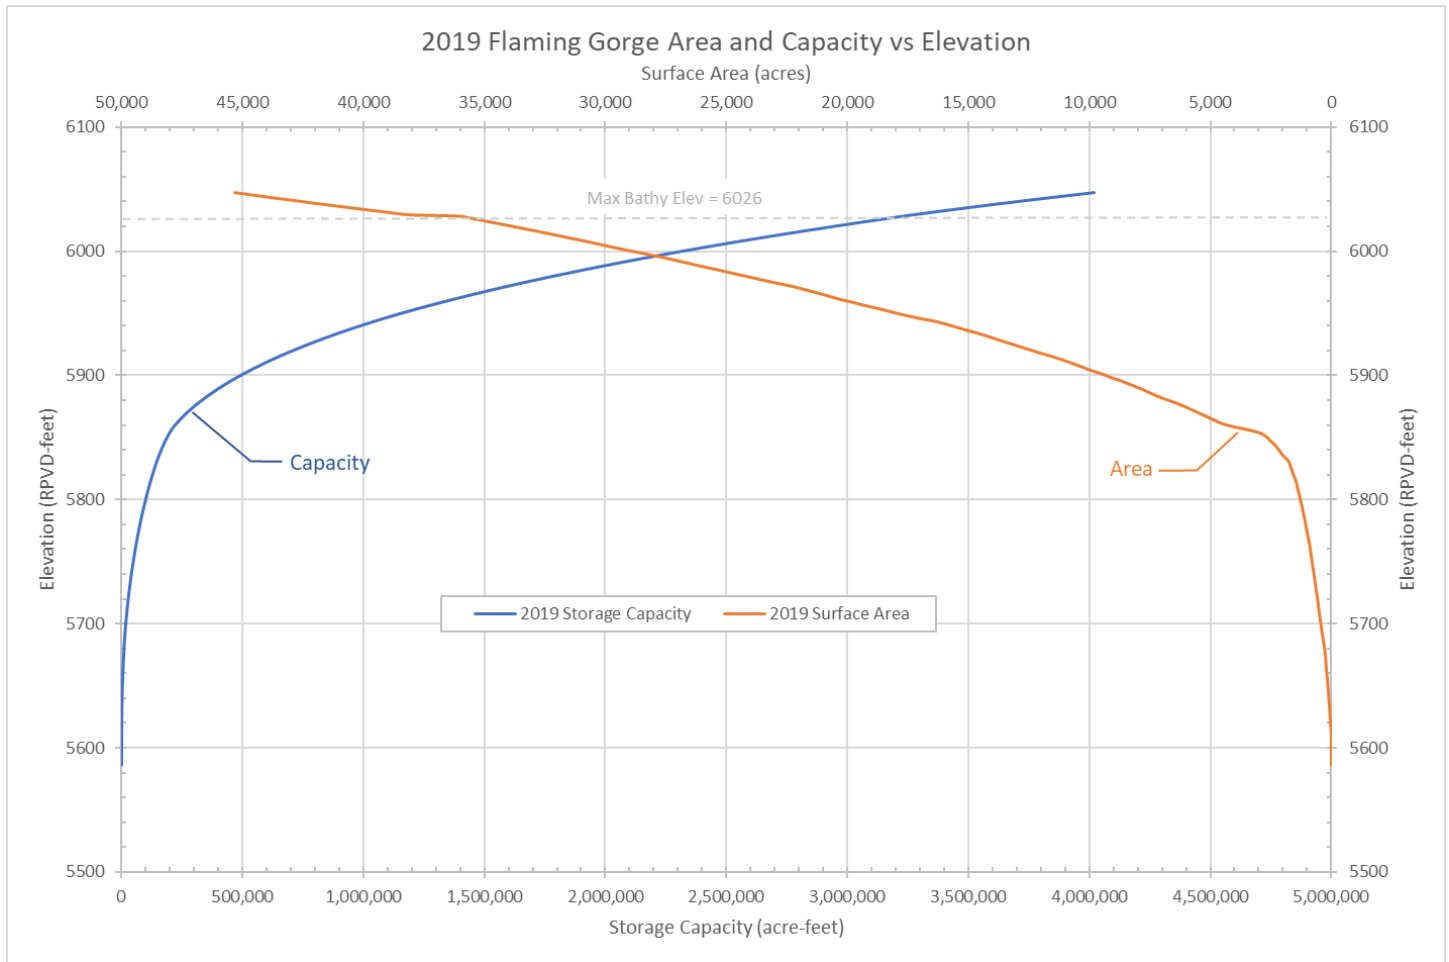

Figure 1. Flaming Gorge Reservoir surface area and storage capacity curves based on the 2019 survey. Use the elevation axes to find the storage capacity (blue curve, bottom axis) or surface area (orange curve, top axis) for a given reservoir elevation.

Area Table at 1-Foot Increments

2019 area-capacity tables are in Reclamation Project Vertical Datum.

The area table is in acres. The elevation increment is one foot.

Area Table at 0.1-foot increments

The area table is in acres. The elevation increment is one-tenth of a foot.
