Lovewell Reservoir 2020 Area and Capacity Tables

Pick-Sloan Missouri Basin Program

Missouri Basin and Arkansas-Rio Grande-Texas Gulf Regions

Mission Statements

The Department of the Interior (DOI) conserves and manages the Nation's natural resources and cultural heritage for the benefit and enjoyment of the American people, provides scientific and other information about natural resources and natural hazards to address societal challenges and create opportunities for the American people, and honors the Nation's trust responsibilities or special commitments to American Indians, Alaska Natives, and affiliated island communities to help them prosper.

The mission of the Bureau of Reclamation is to manage, develop, and protect water and related resources in an environmentally and economically sound manner in the interest of the American public.

Acronyms and Abbreviations

ACAP	Area-Capacity
DOI	Department of the Interior
GIS	Geographic Information System
GPS	Global Positioning System
NAD83	North American Datum, established 1983
NAVD88	North American Vertical Datum of 1988
NED	National Elevation Dataset
RTK	Real-Time Kinematic
RPVD	Reclamation Project Vertical Datum

Introduction

The computation of a relationship between reservoir capacity and elevation is necessary for reservoir operations. The Area Capacity Program (ACAP) Version 2.0 computes the reservoir surface area and reservoir capacity for every 0.01 ft increment given the surface area and reservoir capacity at every 1 ft increment. ACAP V2.0 is a replacement for the ACAP85 program (Reclamation, 1985).

The surface area and storage capacity tables for Lovewell Reservoir were generated from the 2020 survey (Ubing and Hardee, 2021). Reservoir surface areas and capacities at 1-foot increments were first computed using the ArcGIS ACAP toolset, developed at Reclamation. Reclamation's Area-Capacity Program was then used to generate the area and capacity tables at 1-foot, 0.1-foot, and 0.01-foot increments for the full range of reservoir elevations.

The reservoir storage capacity interpolates the reservoir storage capacity at the i^{th} interpolation point between 1-foot intervals using the following equation:

$$V_i = V_b + A_b(y_i - y_b) + C(y_i - y_b)^m \quad (1)$$

where: V_i = storage capacity (acre-feet)
 y_i = reservoir elevation,
 y_b = reservoir elevation at bottom of elevation increment,
 V_b = Storage capacity at elevation y_b (acre-feet),
 A_b = Surface area at elevation y_b (acres)
 C = Coefficient for nonlinear rate of increase in storage capacity
 m = Exponent of nonlinearity in the increase in storage capacity

Area is then calculated as the derivative with respect to y_i of the volume equation:

$$A_i = A_b + Cm(y_i - y_b)^{m-1} \quad (2)$$

where: A_i = Surface area (acres),

A_b = Area at elevation y_b

The coefficients C and m are chosen so that the surface areas (determined using GIS software) and the corresponding storage capacities at the 1-foot intervals are not changed and there is a smooth transition in the interpolated values at the 0.01-foot intervals. Enforcing that the storage volume (V_t) at the top of the

elevation increment equals that from the GIS analysis and then solving equation (1) for C gives:

$$C = \frac{V_t - V_b - A_b \Delta y}{\Delta y^m}$$

where $\Delta y = y_t - y_b$, and y_t is the elevation at the top of the elevation increment. Enforcing that the surface area (A_t) at the top of the elevation increment equals that from the GIS analysis and then substituting into equation (2) gives and the equation for m :

$$m = \frac{(A_t - A_b) \Delta y}{V_t - V_b - A_b \Delta y}$$

Survey Basis and Datum

The 2020 Lovewell Reservoir survey was conducted during June 2020 from a boat using a multibeam depth sounder to continuously measure water depths. The horizontal position of the moving boat was continually tracked using RTK GPS. These bathymetric data were combined with 2010 LiDAR data collected above water during December 2010 to produce a digital surface of the reservoir bottom (Ubing and Hardee, 2021).

All elevation data for these tables are in feet relative to the local Reclamation Project Vertical Datum (RPVD) that is 0.53 feet lower than the North American Vertical Datum of 1988 (NAVD88).

Surface areas from elevation 1554 through 1580 feet (RPVD) were computed from the 2020 bathymetric survey. The surface areas above elevation 1580 feet (RPVD) were computed from the 2010 LiDAR survey (USGS, 2014).

Equation Parameters

Reservoir storage capacity tables using the equation parameters for the full range of reservoir elevations is presented below in RPVD Vertical Datum:

EQUATION NUMBER	ELEVATION BASE	CAPACITY V_b	AREA A_b	RATE COEFF C	CAPACITY EXP m

Data Results

The reservoir surface area and storage capacity results are presented graphically (Figure 1) and in a series of tables in 1-foot, 0.1-foot, and 0.01-foot elevation increments.

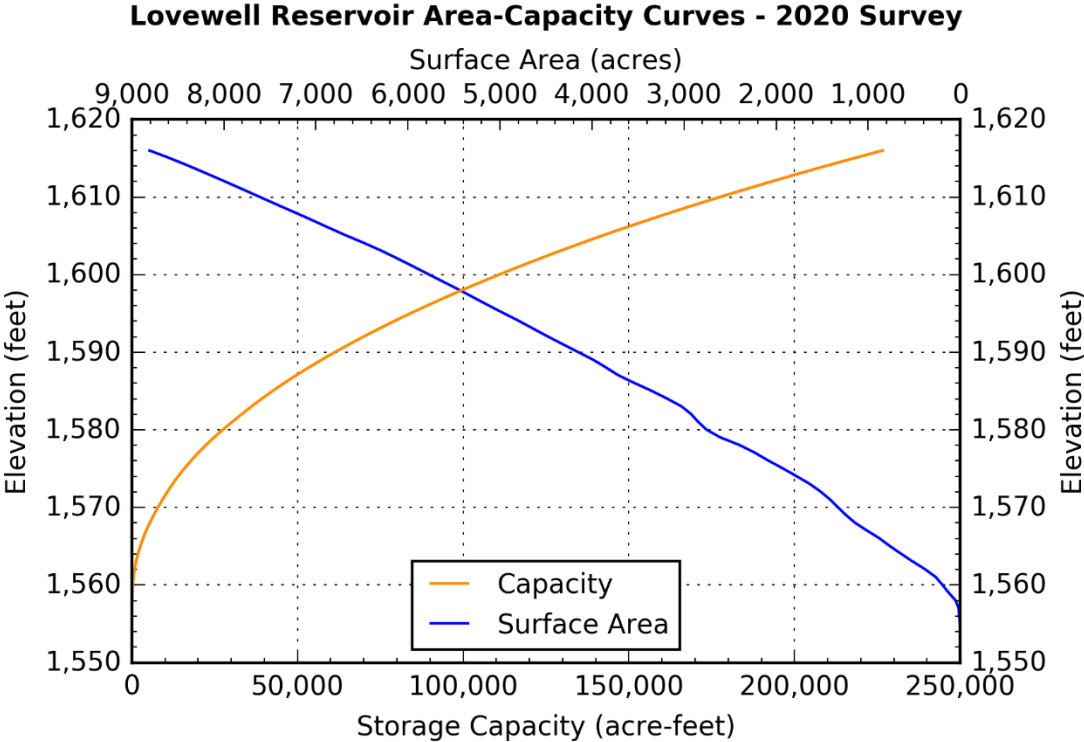

Figure 1. Lovewell Reservoir surface area and storage capacity curves based on the 2020 survey. Use the elevation axes to find the storage capacity (orange curve, bottom axis) or surface area (blue curve, top axis) for a given reservoir elevation.

Area Table at 1-Foot Increments

2020 area-capacity tables are in RPVD vertical datum.

The area table is in acres. The elevation increment is one foot.
